MEMORANDUM

TO: Census Data Users

FROM: Michel A. Lettre, Director, Office of Planning Data

MAL

DATE: July 15, 1983

SUBJECT: Small Area Census Report and Mapping Capabilities

The summary and detailed tables that appear in this publication can be special ordered for small geographic areas in the State. Specifically, the reports are available for the 295 minor civil divisions and the 832 census tracts throughout the State in the form of paper printouts and microfiche. Printed reports can also be prepared for user specified aggregations of minor civil divisions or census tracts in order to delineate market or service areas of interest.

Maps showing the boundaries of minor civil divisions and census tracts for each county of the State are available from the Department of State Planning to assist in identifying the geographic areas of interest. Both census tracts and minor civil divisions observe county lines and cover all territory within each county. Boundaries are established for use over time so that comparisons can be made from census to census. While the population within a minor civil division may vary considerably, the population of census tracts generally averages around 4,000 persons.

The small geographic area reports are of use to city and county planning agencies, business firms, non-profit firms, and neighborhood civic associations in analyzing social, economic and housing patterns and trends. The data is of use in such areas as site evaluation, market share analysis, client profiling, market entry planning, service or sales territory design or realignment, environmental planning, impact analysis, and labor market research.

Finally, any of the data characteristics in this report can be displayed on computer generated maps. Using gray-tone shading to delineate the desired intervals for a particular characteristic of interest (e.g., household income), maps can be prepared to display the data at the county, minor civil division, or census tract level for any desired area in the State. An example of such a map is shown on the reverse side.

For more information about the small area computer generated report and mapping capabilities, please contact the Office of Planning Data (301) 383-5664.

FOREWORD

This is the fourth in a series of statistical reports prepared by the Department of State Planning's Office of Planning Data based on data from the 1980 decennial census. The Department of State Planning has assembled these data to provide an historical base to assess current and projected future trends.

This report is the second in the series based on data released by the Census Bureau in the form of machine readable files. Specifically, this report examines in detail the 1980 social, economic, and housing unit characteristics of Maryland and its political subdivisions based on data released by the United States Bureau of the Census on Summary Tape File 3A. Wherever possible, comparable data from 1970 based on the Fifth Count File C are also displayed.

The tables displayed in this report provide a unique opportunity to compare changes in population, education, labor force, employment, income, poverty status, and housing unit characteristics from 1970 to 1980. Where more detailed data are available for 1980 than for 1970, the complete 1980 data are displayed in addition to the comparable data for both 1970 and 1980.

The data are displayed in thirty-eight summary tables and in forty-four detailed tables for the State, the Department's seven planning regions, and the twenty-three counties and Baltimore City.

The detailed tables displayed in this report are also available separately for smaller geographic areas within the counties such as minor civil divisions and census tracts. Those interested in the tables for these areas can contact the Office of Planning Data at 301/383-5664.

SUMMARY OF FINDINGS

This section summarizes some highlights of changes from 1970 to 1980 in Maryland's population, educational, labor force and employment, income, poverty, and housing characteristics based on data from the decennial censuses. In the highlights which follow, references are made to the summary tables (section one) and detailed tables (sections two through nine) where the data in support of the findings are displayed.

Summary of Selected Population Characteristics

1. Population in Maryland increased by 7.5% to 4,216,975 from 1970 to 1980. The Baltimore and Suburban Washington regions grew at a slower pace than the State, 5.0% and 5.1% respectively. Even with this modest growth, it represented 55.7% of the State's total growth. The fastest growing regions were Southern Maryland, 44.5%, and Frederick, 35.2%. In general, there was a greater dispersion of population throughout the State in 1980 than in 1970. The largest percentage growth (over 30% from 1970 to 1980) occurred in counties which were largely rural in 1970 but have become increasingly attractive as suburbs in the Baltimore and Washington urbanized areas. Specifically, these counties are Carroll, Howard, Calvert, Charles, and Frederick. Queen Anne's County with a population growth of 38.5% also fits this general pattern with its ready access to the metropolitan areas. (see Summary Tables A-1, A-2).

2. From 1970 to 1980 Maryland's black population increased from 17.8% to 22.7% of the total population. Other races (excluding blacks and whites) represented approximately 2.2% of the population in 1980 compared to approximately .6% in 1970, nearly a four fold increase. Increases in non-white (both black and all other races) populations were most significant in Prince George's, Montgomery, and Baltimore counties. Generally, the black population decreased as a share of the total population in the non-metropolitan portions of the State (most notably the counties in Southern Maryland and the Eastern Shore). (see Summary Table A-3).

3. From 1970 to 1980 the number of persons per household declined from approximately 3.26 to 2.82. This decline in household size was reflected in the drop in the percent of households with 5 or more persons from 21.9% in 1970 to 13.9% in 1980 and a corresponding rise in the percent of 1 person households, from 14.9% in 1970 to 20.8% of all households in 1980. The percent of households with 2-4 persons remained about the same (65.3% in 1980 and 63.2% in 1970). Large households were more prevalent in 1980 in those same counties experiencing high population growth such as Carroll, Howard, Calvert, Charles and Frederick (see Summary Table A-5). These counties also had a higher percentage of family households (in excess of 78% of all households were family households compared to a Statewide figure of 75%), (see Summary Table A-6) and a higher percentage of families with their own children (ranging from 55.2% in Carroll County to 64.1% in Charles County) than the State average (52.4%) (see Summary Table A-7). Thus, while household size and the number of families with their own children present declined from 1970 to 1980 throughout the State, those counties with the greatest population growth generally had household sizes and percentages of families with children comparable to the State values in 1970.

4. The percent of Maryland's population that was native born declined slightly from 96.8% in 1970 to 95.4% in 1980. The county with the highest number of foreign born persons in 1980 was Montgomery (70,128 persons or 12.1% of the county's population). Montgomery County was followed by Prince George's (40,036 or 6.0%) and Baltimore (27,092 or 4.1%) counties and by Baltimore City (24,667 or 3.1%). These four jurisdictions accounted for 82.8% of all foreign born persons in the State in 1980. (see Summary Table A-8).

5. Of all persons 5 years old or over in Maryland in 1980, only 55.5% lived in the same house five years earlier. Of the remaining 44.5%, 21.9% lived in the same county but a different house, 10.3% lived in the same State but a different county, 10.4% lived in a different State, and 1.9% lived abroad. Comparable data for 1970 shows that Maryland residents were only slightly less mobile during the period 1975 to 1980 than they were for the period 1965 to 1970. The same jurisdictions which experienced the most rapid population growth between 1970 and 1980, had the highest percentage of persons five years old and over who lived in the same State but a different county in 1975 (ranging from 16.6% in Frederick County to 26.1% in Queen Anne's County compared to the Statewide figure of 10.3%). This indicates that a significant portion of the growth in these counties is attributable to intra-state migration. (see Summary Table A-9).

Summary of Educational Characteristics

The 1980 population of Maryland completed more years of school than the comparable population measured in 1970. Census data on the number of years of school completed as compiled are based on the population of persons 25 years old and over. These data show that 67.5% of the persons counted in 1980 completed high school while only 52.3% of the population completed high school in 1970. The percentage of persons with 4 or more years of college increased from 13.9% in 1970 to 20.4% in 1980. Jurisdictions with the highest percentage of persons with 4 or more years of college were Montgomery (42.8), Howard (38.5), and Prince George's (21.1). Jurisdictions with the largest percentage of their respective populations completing only eight years or less of school were Somerset (31.0), Baltimore City (28.8), Dorchester (28.8), and Garrett (28.1). Even with these comparatively high percentages of persons not completing more than eight years of school, the percentages have dropped significantly from 1970. (see Summary Table B-1).

Summary of Labor Force Characteristics

1. Maryland's population of persons 16 years old and over increased by over 530,000 from 1970 to 1980 and the number of persons in the labor force increased by over 450,000 to 2,108,574 in 1980. The percent of persons 16 years old and over in the labor force increased from 61.7% in 1970 to 65.6% in 1980. Much of this increase in labor force participation was due to the large increase in the number of females in the labor force. The number of females in the labor force increased by nearly 301,000 (or 67% of the total increase of 450,000) to 920,579 in 1980. As a result, the female labor force participation rate jumped from 44.4% in 1970 to 54.6% in 1980. In Prince George's County the female labor force participation rate of 65.0% nearly equaled the overall Statewide rate of 65.6%. Howard County was the only other jurisdiction with a female labor force participation rate in excess of 60%. Statewide in 1980, the civilian

labor force unemployment rate for females was only slightly higher at 5.9% than the overall rate of 5.8%. The growth in the labor force and, in particular, the number of females in the labor force, was also accompanied by an increase in the unemployment rate from 3.2% in 1970 to 5.8% in 1980. (see Summary Tables C-1 and C-2).

2. The percent of both white and black males 16 years old and over in the labor force declined slightly from 1970 to 1980 (from 81.9% to 79.3% for white males and from 73.4% to 71.1% for black males). Black males, in addition to having a smaller labor force participation rate than white males, also had a higher unemployment rate in 1980 (11.4% for black males compared to 4.3% for white males). White males unemployed in 1980 ranged from a low of 2.4% in Howard and Montgomery counties to a high of 10.6% in Garrett County. Black male unemployment ranged from a low of 3.5% in Howard County (excluding counties with small black male populations) to 23.4% in Calvert County. Black male unemployment in the two jurisdictions with the largest black male populations was 6.8% for Prince George's County and 16.2% for Baltimore City in 1980. (see Summary Table C-4).

3. Unlike males, the percent of both white and black females in the labor force increased significantly from 1970 to 1980 (from 42.6% to 52.5% for white females and from 53.0% to 61.6% for black females). Howard, Prince George's, and Montgomery counties had the highest white female labor force participation rates, 60.3%, 59.0%, and 57.6% respectively. The highest black female labor force participation rates occurred in Prince George's, Montgomery, Baltimore, and Howard counties, 75.7%, 72.3%, 71.8%, and 70.6% (comparable to the overall black male participation rate of 71.1%). The black female unemployment rate for the State in 1980 was 9.5%, lower than the black male unemployment rate of 11.4%. The white female unemployment rate in 1980 was 4.7%, slightly higher than the white male rate of 4.3%. (see Summary Table C-5).

4. The greatest change in employment by a major industry was in manufacturing, where the percentage of total Maryland residents employed in this sector declined from 19.5% in 1970 to 14.4% in 1980. Every region of the State experienced this decline with the Baltimore Region particularly hard hit. From 1970 to 1980 the percent of all persons employed in manufacturing and residing in the Baltimore Region declined from 68.1% to 63.2% of the State. In Baltimore City, the percent of all persons employed in manufacturing and residing in the city declined from 30.2% to 20.6% of the State. Alternatively, Baltimore County's share of all persons employed in manufacturing and residing in the county stayed fairly stable, 23.2% in 1980 compared to 23.9% in 1970. (see Summary Tables C-6 and C-7). In part, this may be the result of the large migration of residents from Baltimore City to Baltimore County, many of whom may be employed in manufacturing.

Summary of Income Characteristics

1. Per capita income for Maryland, a measure of the average income for each person, increased 28.4% to nearly $8,300 from 1969 to 1979 (as measured in constant dollars based on price inflators and deflators for personal consumption expenditures for

1969 and 1979 respectively)* (see Summary Table D-11). In part, this change reflected the changing mix of households from 1969 to 1979 to fewer large households, more one person households, and fewer children per household. In addition, the percent of persons 16 years old and over who were actually employed increased from about 59.8% in 1970 to 61.9% in 1980 (see Summary Table C-1). Jurisdictions experiencing significant population growth over the decade also had increases in per capita income well above the State average. In part, this reflected the new residents commuting from these outlying growth counties to higher paying jobs in the metropolitan areas (see place of work characteristics, Detailed Table D-2). The combined effect of population growth along with per capita income increases resulted in very large increases in the aggregate income of the total population of these same counties from 1969 to 1979 (increases in aggregate income in constant dollars ranged from 90.6% in Frederick County to 175.0% in Howard County compared to 38.0% Statewide). The older suburban counties such as Baltimore, Montgomery, and Prince George's experienced increases in aggregate and per capita income more similar to the overall Statewide figures. Baltimore City showed the smallest increase in per capita income (11.0%) and a loss in aggregate income (in constant dollars) from 1969 to 1979. This suggests that the out-migration from the city over the decade took with it persons of greater means and left behind a poorer population (see Summary Tables D-1 and E-1).

2. The aggregate income of unrelated individuals increased over 115% from 1969 to 1979 (in constant dollars, see Summary Table D-2). In part, this reflected the increase in the number of unrelated individuals. Controlling for this, the Statewide mean or per capita income for unrelated individuals still increased by 30% from 1969 to 1979 (in constant dollars, see Summary Table D-2). The median income of unrelated individuals increased Statewide 47.5% (in constant dollars) from 1969 to 1979 (see Summary Table D-4).

3. The aggregate income of families increased by only 28.8% from 1969 to 1979 (in constant dollars, see Summary Table D-3). In part, this reflected the comparatively slow growth in the number of family households (12.4%) compared to the large increase in the number of non-family households (80.5%) (see Summary Table A-6). Controlling for this, the mean or per capita income of families (not persons in families) increased Statewide by 14.6% from 1969 to 1979 (in constant dollars, see Summary Table D-3). The median income of families increased Statewide by 12.8% from 1969 to 1979 (in constant dollars, see Summary Table D-4). Since the number of persons per family decreased from 1970 to 1980, the increase in income per person in a family actually increased by more than that suggested by the mean and median. Families headed by a woman with no spouse present increased from 11.4% of all families in 1970 to 16.2% of all families in 1980 (see Summary Table A-7). The increase in female-headed families restrained the growth in family income, since these families typically have lower incomes than married-couple families (see Detailed Table F-1). Once again, those counties with the largest growth in population experienced increases in aggregate and mean family income well in excess of the Statewide figures.

---

*Price inflators and deflators for personal consumption expenditures were obtained from the National Income and Product Accounts Statistical Tables, a supplement to the Survey of Current Business Patterns prepared by the U.S. Department of Commerce.

4. The Statewide median income in 1979 of households was $20,281, of families $23,112, and of non-family households $12,026. Montgomery County had the highest median family income in the State, $33,863, followed by Howard County, $30,404. The median income of families in the remaining older suburban counties as well as the high population growth counties (new suburban counties) ranged from $22,639 (Frederick County) to $25,525 (Prince George's County). Median family incomes for the counties in the Western Maryland, Eastern Shore, and Frederick regions were below the Statewide median. Somerset, Garrett, and Baltimore City had the lowest median family incomes of any jurisdiction ($14,602, $14,957, and $15,721, respectively). (see Summary Table D-5).

5. The Gini Ratio* was estimated to be .363 for families Statewide in 1979 compared to .361 in 1969, suggesting little change over the decade. For unrelated individuals, the Gini Ratio declined from .510 in 1969 to .475 in 1979 indicating a movement towards greater income equality (see Summary Tables D-4 and D-5). This movement is also suggested by the fact that the percent of unrelated persons below the poverty level dropped from 32.2% in 1969 to 22.2% in 1979 (see Summary Table E-2). The percent of families below the poverty level declined only slightly from 7.7% in 1969 to 7.5% in 1979 (see Summary Table E-1).

6. The Gini Ratio* for family income in 1979 ranged from a low of .304 (Howard County) to a high of .412 (Baltimore City). In the older suburban counties and the high population growth counties (new suburban counties) the family income Gini Ratios were below the Statewide figure of .363 (ranging from .304 to .337), suggesting increased income equality among families in these counties. The Gini Ratio was above .345 for all of the Western Maryland and Eastern Shore counties with the exception of Cecil County which had a Gini Ratio of .328 (see Summary Table D-5).

7. Calculation of the Gini Ratio* for family income by race for 1979 shows greater income equality among whites (.345) than among blacks (.397) and all other races (.397) (see Summary Table D-6). Since the Gini Ratio is largely dependent on the way income is distributed among a group of persons, the higher ratios for non-whites suggests there may be more persons at the extremes (low income and/or high incomes) among these groups than among whites (see Detailed Table E-4). It is interesting to note that the two jurisdictions with the largest black populations represent the two extremes for Gini Ratios. Prince George's County with the second largest black population has a Gini Ratio for black families estimated to be .318 (indicating a more equal distribution of income among black families). Baltimore City with the largest black population has a Gini Ratio estimated to be .426 (indicating a less equal distribution of income among black families) (see Summary Table D-6).

---

*The Gini Ratio as used here is a measure of income inequality which can range from 0, complete equality in the distribution of income, to 1, complete inequality in the distribution of income (see Appendix F for a more detailed explanation).

Summary of Poverty Characteristics

1. While the number of families below the poverty level in Maryland increased by about 9.6% to 82,012 families in 1979, the percent of families below the poverty level decreased slightly from 7.7% in 1969 to 7.5% in 1979. The percent of families below the poverty level actually increased from 1969 to 1979 in Baltimore County, Baltimore City, and Prince George's County. Baltimore City with only 17.3% of all families in the State in 1979 had 43.6% of all families below poverty level in the State. Other jurisdictions with large concentrations of families below the poverty level were Prince George's (9.9% of the State), Baltimore (8.9%), Anne Arundel (5.9%), and Montgomery County (5.7%). All of the older suburban counties and all of the high population growth or new suburban counties with the exception of Calvert County had percentages of all families below the poverty level lower than the State figure of 7.5%. With the exception of Cecil and Talbot counties, all of the Western Maryland and Eastern Shore counties equaled or exceeded the State figure of 7.5%. (see Summary Table E-1).

2. While the number of unrelated persons below the poverty level increased 21.8% to 110,588 individuals in 1979, the percent of unrelated individuals below the poverty level decreased rather dramatically from 32.2% in 1969 to 22.2% from 1979. This percentage decrease was due to the increase in the number of unrelated individuals by nearly 77% from 1969 to 1979. The percent of unrelated individuals below the poverty level decreased from 1969 to 1979 in all jurisdictions of the State. Baltimore City with 25.6% of the unrelated individuals in the State in 1979, had 39.0% of all unrelated individuals in the State who were below the poverty level. The remaining largest concentrations of unrelated individuals below the poverty level in the State were in Prince George's County (13.0% of the State), Baltimore County (10.0%), and Montgomery County (8.3%). The percent of unrelated individuals below the poverty level in 1979 was below the Statewide figure of 22.2% in all the counties in the Baltimore and Suburban Washington regions and above the Statewide figure in all the remaining regions and counties of the State. (see Summary Table E-2).

3. Statewide in 1979, the percent of unrelated individuals 65 years old and over below the poverty level was 27.6%. Baltimore City, with 31.4% of all the elderly unrelated individuals in the State in 1979, had 40.5% of the poor and elderly unrelated individuals in the State. With 35.6% of its elderly unrelated individuals below the poverty level, Baltimore City was one of nine jurisdictions with 35% or more of its elderly below the poverty level. The other eight counties were Charles, St. Mary's, Garrett, Caroline, Kent, Dorchester, Somerset, and Worcester. The percent of elderly unrelated individuals below the poverty level in 1979 was below the State figure of 27.6% in all the counties in the Baltimore and Suburban Washington regions except Carroll County (29.3%). (see Summary Table E-3).

Summary of Selected Housing Unit Characteristics

1. In 1980, 80.6% of the State's year-round housing units were located in the Baltimore and Suburban Washington regions compared to 82.2% in 1970. The share of the State's year-round housing units in the Southern Maryland and Frederick regions increased from 4.9% to 6.1% from 1970 to 1980, thus, accounting for most of the loss in share in the Baltimore and Suburban Washington regions. Statewide, the number of

year-round housing units increased by 25.7% to 1,549,680 units in 1980. This large increase occurred during a period in which the State's population increased by only 7.5%. The increase in housing units reflected the increase in the number of households and the decrease in the number of persons per household from 1970 to 1980. (see Summary Table F-1).

2. In 1980, 23.6% of all structures containing year-round housing units were under ten years old, 23.5% were from 10-20 years old, and 52.9% were over 20 years old. This compares to 1970 when over 30% of the structures containing year-round housing units were under ten years old and less than 47% were over 20 years old. In nine counties in 1980, over 35% of the year-round housing unit structures were less than ten years old. These counties were Carroll, Harford, Howard, Calvert, Charles, St. Mary's, Frederick, Queen Anne's, and Worcester (see Summary Table F-2). All of these counties had population growth from 1970 to 1980 in excess of 25% (see Summary Table A-1). Those jurisdictions with over 60% of their year-round housing stock in structures over 20 years old were Baltimore City, Allegany, Washington, Caroline, Kent, Talbot, Dorchester, and Somerset counties (see Summary Table F-2).

3. Statewide in 1980, 23.8% of owner occupied housing units were in structures under ten years old and 54.7% were in structures over 20 years old. In nine counties in 1980, 35% or more of the owner occupied housing units were in structures less than ten years old. These counties were Carroll, Harford, Howard, Calvert, Charles, St. Mary's, Frederick, Queen Anne's, and Worcester. In six jurisdictions in 1980, 60% or more of the owner occupied housing units were in structures over 20 years old. These jurisdictions were Baltimore County, Baltimore City, Allegany, Kent, Dorchester, and Somerset counties. (see Summary Table F-3).

4. Statewide in 1980, 22.3% of renter occupied housing units were in structures under ten years old and 50.3% were in structures over 20 years old. In only five counties in 1980 were 30% or more of the structures containing renter occupied housing units less than ten years old. These counties were Anne Arundel, Baltimore, Harford, Howard, and Charles counties. In fifteen jurisdictions in 1980, over 60% of the renter occupied units were in structures over 20 years old. These jurisdictions were Carroll County, Baltimore City, Calvert County, Frederick County, all three Western Maryland Region counties, and all the Eastern Shore counties with the exception of Wicomico County. (see Summary Table F-3).

5. Statewide in 1980, 65.4% of all occupied housing units were occupied by the same householder for less than ten years, 17.9% for 10-20 years, and 16.7% for over 20 years. This compares with 1970 when 68.5% of all occupied units had been occupied by the same householder for less than ten years, 18.9% for 10-20 years, and 12.6% for over 20 years. In 1980, there were five jurisdictions with 70% or more householders in the same household for less than 10 years. These counties were Howard, Prince George's, Calvert, Charles, and St. Mary's. Four of these counties experienced large population growth from 1970 to 1980 (Howard, Calvert, Charles, and to a lesser extent, St. Mary's), while Prince George's experienced a high turnover of its population (St. Mary's County also experienced turnover of its population associated with military personnel). In only three counties, Allegany, Dorchester, and Somerset, were there 25% or more of the householders occupying the same housing unit after 20 years. All three of these counties experienced little or no population growth from 1970 to 1980. (see Summary Table F-5).

6. Statewide in 1980, 10.1% of householders in owner occupied units and 37.7% of householders in renter occupied units occupied the same household for 15 months or less. Jurisdictions which grew from 1970 to 1980 or experienced rapid turnover in their population (both heavy in and out migration) showed higher percentages of householders with short durations of stay in the household. Jurisdictions which experienced little growth or turnover showed a higher percentage of householders with large durations of stay in the household. Baltimore City falls into this latter category with its decline in population due to heavy out-migration that was not offset by a comparable level of in-migration. (see Summary Table F-5).

7. Statewide in 1980, 69.2% of all occupied housing units were in one unit structures, 7.4% were in structures with from two to four units, 21.6% were in structures with five or more units, and 1.8% were mobile homes or trailers. This compares to 1970 when 69.4% were in one unit structures, 10.1% were in structures with two to four units, 18.7% were in structures with five or more units, and 1.7% were mobile homes or trailers. In 1980, only three jurisdictions had fewer than 70% of their occupied housing units in one unit structures. These jurisdictions were Baltimore City, Montgomery, and Prince George's counties. Montgomery and Prince George's counties were the only jurisdictions in 1980 with more than 30% of their occupied housing units in structures with five or more units. In 1980, over 4% of the occupied housing units were mobile homes or trailers in Harford, Calvert, St. Mary's, Garrett, Washington, and all nine of the Eastern Shore counties. (see Summary Table F-6).

8. Statewide in 1980, 92.1% of all owner occupied housing units were in one unit structures, 72.5% were in one unit detached structures, and 19.6% were in one unit attached structures. Baltimore City had the highest percent of owner occupied units in one unit attached structures, 69.5%, followed by Baltimore County, 24.5%. Only three other jurisdictions had more than 10% of their owner occupied units in one unit attached structures - Montgomery (10.1%), Prince George's (10.2%), and Howard (14.1%) counties. Only two counties had more than 10% of their owner occupied housing units in mobile homes or trailers - St. Mary's (11.9%) and Garrett (12.7%) counties. (see Summary Table F-7).

9. Statewide in 1980, only 31.9% of renter occupied housing units were in one unit structures with 52% in structures with five or more units. Counties with more than 50% of renter occupied housing units in one unit structures included the three Southern Maryland and nine Eastern Shore counties as well as Garrett County. The four counties with over 55% of their renter occupied units in structures with five or more units were Baltimore County (58.6%), Howard (63.9%), Montgomery (74.1%), and Prince George's (79.4%) counties. Over 10% of renter occupied housing units were mobile homes or trailers in St. Mary's (13.4%), Garrett (10.2%), and Caroline (10.4%) counties. (see Summary Table F-7).

10. Statewide in 1980, 82.8% of all year-round housing units received water from public or private water supply systems, the same percentage as 1970. From 1970 to 1980 the number of year-round units with water from a water supply system increased by 25.7% to 1,283,600 units. The number of year-round units receiving water from water supply systems increased by well over 100% in Howard, Calvert, Charles, and Worcester counties. Four jurisdictions in 1980 had over 90% of their year-round housing units receiving water from a public or private water supply system. They were Baltimore City (99.9%), Prince George's (97.6%), Montgomery (94.8%), and Baltimore (91.5%) counties. Eleven jurisdictions had less than 50% of their year-round housing units receiving water from a public or private water supply system. They were Carroll (38.7%), Calvert (24.8%), St. Mary's (33.1%), Garrett (28.9%), Caroline (36.9%), Cecil

(40.8%), Kent (42.6%), Queen Anne's (13.0%), Talbot (45.4%), Somerset (38.8%), and Wicomico (46.2%) counties. (see Summary Table F-8).

11. Statewide in 1980, 79.6% of all year-round housing units were connected to a public sewage disposal system, an increase from 77.2% in 1970. From 1970 to 1980, the number of year-round units with public sewage disposal increased by 29.5% to 1,232,785 units. The number of year-round units with public sewage disposal increased by well over 100% in Carroll, Howard, Calvert, Charles, and Worcester counties. Those jurisdictions in 1980 with over 90% of their year-round units with public sewage disposal were Baltimore City (98.8%), Montgomery (92.8%), and Prince George's (95.2%). Those jurisdictions with less than 50% of their year-round units with public sewage disposal were Carroll (33.7%), Calvert (14.4%), Charles (44.8%), St. Mary's (26.2%), Frederick (49%), Garrett (25.6%), Caroline (32.1%), Cecil (40.5%), Kent (42.7%), Queen Anne's (13.7%), Talbot (43.5%), Somerset (33.5%), and Wicomico (44.8%) counties. (see Summary Table F-8).

12. Statewide from 1970 to 1980, use of electricity as a heating fuel increased from only 4.9% to 13.8% of all occupied housing units. Fuel oil or kerosene as a house heating fuel declined from 43.6% in 1970 to 36.1% in 1980, while utility gas declined slightly from 47.0% in 1970 to 46.0% in 1980. The dominant house heating fuel in the Southern Maryland and the Eastern Shore counties as well as in Carroll, Frederick, and Washington counties was fuel oil or kerosene followed by electricity and then utility gas. Utility gas was the dominant heating fuel in Allegany, Montgomery, Prince George's, and Baltimore counties and to a lesser extent Baltimore City, Howard, and Anne Arundel counties followed by fuel oil or kerosene and then electricity. In Harford and Garrett counties, the largest percentage of homes were heated with fuel oil or kerosene followed by utility gas and electricity. (see Summary Table F-9).

13. Statewide from 1970 to 1980, use of electricity as a cooking fuel increased from 29.0% to 40.4% of all occupied housing units. Utility gas as a cooking fuel declined from 60.5% in 1970 to 50.8% in 1980 and bottled, tank or L.P. gas declined from 9.2% in 1970 to 8.3% in 1980. The dominant cooking fuel in the Southern Maryland and Eastern Shore counties as well as Garrett and Frederick counties was electricity. Bottled, tank or L.P. gas was the second most widely used cooking fuel and utility gas was a distant third. The main cooking fuel used in Baltimore City, Baltimore County, Prince George's County and to a lesser extent, Montgomery County, was utility gas. Electricity followed by bottled, tank, or L.P. gas was a distant third. Electricity was the dominant cooking fuel in Anne Arundel, Carroll, Harford, Howard, Allegany, and Washington counties followed by utility gas (with the exception of Carroll County) and then bottled, tank, or L.P. gas. (see Summary Table F-10).

14. Statewide in 1980, 35% of all households reported one motor vehicle available, 51.5% reported two or more motor vehicles available, and 13.5% reported no motor vehicle available. This represented an increase in motor vehicle availability from 1970. Baltimore City had the highest percentage of households with no motor vehicle reported available, 38.2%. The next closest jurisdiction was Somerset County with 16.3%. Nine other jurisdictions reported at least 10% of their households were without a motor vehicle. They were Allegany (14.8%), Garrett (10.2%), Washington (11.7%), Caroline (10.9%), Kent (11.3%), Dorchester (13.2%), Somerset (16.3%), Wicomico (11.8%), and Worcester (11.2%) counties. Charles county had the highest percentage of households with two or more motor vehicles reported available, 71.4%. Carroll County was next with 70.3%. Eight other jurisdictions reported 60% or more households with two or

more motor vehicles available. They were Anne Arundel (63.1%), Harford (64.9%), Howard (68.0%), Calvert (68.6%), St. Mary's (60.8%), Frederick (64.9%), Cecil (62.3%), and Queen Anne's (65.8%) counties. All of these counties experienced increases in population from 1970 to 1980 well above the State figure. These jurisdictions also had a high percentage of workers who commute to jobs outside their county of residence. (see Summary Table F-11).

15. Statewide in 1980, 70.1% of all year-round housing units had air conditioning (either central or room units) compared to 50.6% in 1970. Garrett County had the smallest percentage of units with air conditioning, 4.6%. The next smallest percentage was in Allegany with 36.3%. Eight other jurisdictions had 50.0% or fewer units with air conditioning. They were Carroll County (46.5%), Baltimore City (50.0%), Caroline (47.9%), Cecil (48.9%), Kent (45.0%), Queen Anne's (48.8%), Dorchester (45.8%), and Somerset (43.7%) counties. Montgomery County had the highest percentage of units with air conditioning, 90.8%. The next highest jurisdiction was Prince George's County with 86.8%. Four other jurisdictions had more than 70% of their units with air conditioning. They were Anne Arundel (77.5%), Baltimore (77.8%), Howard (85.5%), and Charles (77.5%) counties. (see Summary Table F-12).

16. Statewide, 95.8% of all occupied housing units had a telephone available in 1980, compared to 89.6% in 1970. The percentage of units with a telephone available increased in all jurisdictions of the State from 1970 to 1980 with at least 90.0% of the households in each county having a telephone available. Statewide in 1980, telephone availability in owner occupied units was 98.5% and in renter occupied units was 91.3%. In owner occupied units, the percentage ranged from a low of 93.7% in Somerset County to a high of 99.7% in Montgomery County. In renter occupied units, the percentage ranged from a low of 76.4% in Cecil County to a high of 97.6% in Montgomery County. (see Summary Table F-12).

REPORT ORGANIZATION

Sections

The body of this report consists of nine sections containing statistical tables on social, economic, and housing characteristics based on both the 1980 and 1970 censuses. The data are for the State, the Department of State Planning's seven planning regions, and each of the political subdivisions within the planning regions.

Section one consists of summary tables showing selected characteristics that appear in more detail in the remaining sections of the report.

Sections two through nine include detailed tables for each of the following geographic areas:

Section Two: State of Maryland

Section Three: Baltimore Region - Baltimore Region, Anne Arundel County, Baltimore County, Carroll County, Harford County, Howard County, Baltimore City

Section Four: Suburban Washington Region - Suburban Washington Region, Montgomery County, Prince George's County

Section Five: Southern Maryland Region - Southern Maryland Region, Calvert County, Charles County, St. Mary's County

Section Six: Frederick Region - Frederick County

Section Seven: Western Maryland Region - Western Maryland Region, Allegany County, Garrett County, Washington County

Section Eight: Upper Eastern Shore Region - Upper Eastern Shore Region, Caroline County, Cecil County, Kent County, Queen Anne's County, Talbot County

Section Nine: Lower Eastern Shore Region - Lower Eastern Shore Region, Dorchester County, Somerset County, Wicomico County, Worcester County

Tables

Section one contains thirty-eight (38) summary tables for selected population, educational, labor force, employment, income, poverty status, and housing unit characteristics. Each table includes data for the State, regions, and the political subdivisions within each region. A list of the summary tables appears in Exhibit 1.

Sections two through nine provide detailed tables for the State, planning regions, and political subdivisions. For each geographic area, forty-four (44) tables are displayed on twenty (20) pages. The tables appearing on twelve of the twenty pages include not only 1980 data but comparable data for 1970. Exhibit 2 lists the detailed tables. A

EXHIBIT 1. LIST OF SECTION ONE SUMMARY TABLES

A. Summary of Selected Population Characteristics
    1. Population - Urban and Rural, 1980 and 1970
    2. Population - Urban and Rural, 1980 and 1970
    3. Population by Race, 1980 and 1970
    4. Households and Persons in Households, 1980 and 1970
    5. Persons in Households and in Group Quarters, 1980 and 1970
    6. Household Type, 1980 and 1970
    7. Family Type and Presence of Own Children, 1980 and 1970
    8. Nativity, 1980 and 1970
    9. Residence in 1975 and 1965 - State and County Level, 1980 and 1970

B. Summary of Educational Characteristics
    1. Years of School Completed for Persons 25 Years Old and Over, 1980 and 1970

C. Summary of Labor Force and Employment Characteristics
    1. Labor Force Status, 1980 and 1970
    2. Female Labor Force Status, 1980 and 1970
    3. Male Labor Force Status by Race, 1980 and 1970
    4. Female Labor Force Status by Race, 1980 and 1970
    5. Persons 16 Years and Over in the Civilian Labor Force Employed and Unemployed by Sex and Race, 1980
    6. Employment by Industry by Place of Residence, 1980 and 1970
    7. Employment by Industry by Place of Residence, 1980 and 1970

D. Summary of Income Characteristics
    1. Aggregate and Per Capita Income of the Total Population, 1979 and 1969
    2. Aggregate and Mean Income of Unrelated Individuals, 1979 and 1969
    3. Aggregate and Mean Family Income, 1979 and 1969
    4. Median Income of Unrelated Individuals and Families, 1979 and 1969
    5. Mean and Median Income of Households, Families, and Non-Family Households, 1979
    6. Mean and Median Income of Families by Race and Spanish Origin, 1979

E. Summary of Poverty Characteristics
    1. Families and Poverty Status, 1979 and 1969
    2. Unrelated Individuals for Whom Poverty Status has been Determined and Poverty Status, 1979 and 1969
    3. Unrelated Individuals for Whom Poverty Status has been Determined by Age and Poverty Status, 1979

F. Summary of Selected Housing Unit Characteristics
    1. Total Year Round and Occupied Housing Units, 1980 and 1970
    2. Age of Year-Round Housing Units, 1980 and 1970
    3. Tenure and Age of Occupied Housing Units, 1980
    4. Length of Occupancy of the Housing Unit by the Same Householder, 1980 and 1970
    5. Tenure and Length of Occupancy of the Housing Unit by the Same Householder, 1980
    6. Total Occupied Housing Units and Units in Structure, 1980 and 1970

8. Public Water and Sewage Disposal in Year-Round Housing Units, 1980 and 1970
9. House Heating Fuel Used in Occupied Housing Units, 1980 and 1970
10. Cooking Fuel Used in Occupied Housing Units, 1980 and 1970
11. Vehicles Available Per Occupied Housing Unit, 1980 and 1970
12. Air Conditioning and Telephone Availability, 1980 and 1970

EXHIBIT 2. LIST OF DETAILED TABLES APPEARING IN SECTIONS TWO THROUGH NINE

REFERENCE PAGE NUMBER — TABLE TITLE

A. Selected Population Characteristics

1 — 1. Population - Urban and Rural, 1980 and 1970
1 — 2. Population by Race, 1980 and 1970
2 — 3. Persons in Households, 1980 and 1970
2 — 4. Household Type and Relationship and Type of Group Quarters, 1980 and 1970
3 — 5. Family Type and Race by Presence of Own Children, 1980 and 1970
3 — 6. Nativity and Place of Birth, 1980 and 1970
4 — 7. Residence in 1975 and 1965 - State and County Level

B. Educational Characteristics

4 — 1. Years of School Completed, 1980 and 1970
5 — 2. Years of School Completed by Age, 1980
5 — 3. School Enrollment, Years of School Completed and Labor Force Status, 1980
6 — 4. Public and Private School Enrollment, 1980
6 — 5. School Enrollment by Race and Spanish Origin, 1980

C. Labor Force and Employment Characteristics

7 — 1. Labor Force Status by Race and Sex, 1980 and 1970
8 — 2. Employment by Industry by Place of Residence, 1980 and 1970
9 — 3. Presence and Age of Own Children by Labor Force Status, 1980
9 — 4. Occupation, 1980

D. Class of Worker and Commuting Characteristics

10 — 1. Class of Worker by Place of Residence, 1980
10 — 2. Place of Work, 1980
10 — 3. Means of Transportation to Work, 1980
10 — 4. Travel Time to Work, 1980

E. Income Characteristics

11 — 1. Income of Unrelated Individuals, 1979 and 1969
11 — 2. Income of Families in 1979 and 1969
12 — 3. Income of Households and Families in 1979
12 — 4. Family Income by Race and Spanish Origin in 1979
13 — 5. Households with Income by Type of Income in 1979
13 — 6. Workers in Family and Income in 1979

F. Poverty Characteristics

14 — 1. Family Type and Poverty Status in 1979 and 1969
14 — 2. Poverty Status of Unrelated Individuals in 1979 and 1969
15 — 3. Poverty Status by Race in 1979
15 — 4. Poverty Status by Age in 1979
15 — 5. Income in 1979

EXHIBIT 2. (continued)

16	1. Tenure and Occupancy Status by Year Structure Built, 1980 and 1970
16	2. Tenure by Year Householder Moved into Unit, 1980 and 1970
17	3. Tenure and Occupancy Status by Units in Structure, 1980 and 1970
17	4. Source of Water and Sewage Disposal, 1980 and 1970
17	5. House Heating and Cooking Fuels, 1980 and 1970
18	6. Vehicles Available, 1980 and 1970
18	7. Air Conditioning, 1980 and 1970
18	8. Telephone Availability, 1980 and 1970
	H. Financial Characteristics of Housing Units
19	1. Gross Rent, 1979 and 1969
19	2. Household Income and Gross Rent as a Percentage of Income for 1979 and 1969
20	3. Mortgage Status and Selected Monthly Costs by Race of Householder, 1979
20	4. Household Income and Selected Monthly Owner Costs as a Percentage of Income in 1979
20	5. Mortgage Status and Selected Monthly Owner Costs by Year Householder Moved into Unit, 1980

"reference page number" for each table is also shown on Exhibit 2. The reference page refers to the relative page number (1-20) on which each of the detailed tables appear for a given geographic area. This page number is different from the page number referred to in the table of contents. The reference page number appears in the upper right hand corner of each detailed table page and is a useful aid in locating the same page or table for different geographic areas.

Appendices

The nine sections are followed by seven appendices:

Appendix A. 1970 Fifth Count File C Summary Tape - List of Tables, lists the titles of the summary tables which appear on the Census Bureau's fifth count tape file for 1970. These tables were derived from answers to questions asked of a sample of persons and housing units in the 1970 Census.

Appendix B. 1980 Summary Tape File 3A - List of Tables, lists the titles of the summary tables which appear on the Census Bureau's summary tape file 3 for 1980. These tables were derived from answers to questions asked of a sample of persons and housing units in the 1980 Census.

Appendix C. Table Outlines for the 70-80 Comparison File of Maryland Social, Economic, and Housing Characteristics, lists the tables prepared by the Department of State Planning's Office of Planning Data and shows the subject content for those population and housing characteristics for which comparable 1970 and 1980 data exist.

Appendix D. Minor Civil Divisions for Which the Tables in this Report are Available - provides a list of the minor civil divisions for which the tables in this report can be made available by request.

Appendix E. Census Tract Equivalents for Which the Tables in this Report are Available - provides a list of the census tracts (70-80 equivalent areas) for which the tables in this report can be made available by request.

Appendix F. Explanation of Lorenz Curve and Gini Ratios - provides a more detailed explanation of these two concepts as they relate to the display and analysis of income data from the censuses.

Appendix G. Glossary of Terms - defines those terms useful in understanding the data and concepts used in the tables which appear in this report.

METHODOLOGY

In an earlier report (Publication 82-3, January, 1982), the Office of Planning Data provided a profile at the State and county level of changes between 1970 and 1980 in population and housing characteristics based on those questions from the decennial censuses asked of the entire population. The tables that appeared in that report were also made available separately in the form of computer printouts for smaller, comparable geographic areas (specifically census tracts, minor civil divisions, and municipalities).

The Office of Planning Data's objective in this report is to present 1980 data based on responses to those more detailed questions asked of only a sample of the population. In a manner similar to the prior publication, comparable data from the 1970 Census is also displayed where possible. Finally, while this report displays data for the State, planning regions, and counties, there is also the capability to prepare separately these same tables for smaller, comparable geographic areas (specifically census tracts and minor civil divisions).

To achieve the objectives of subject area comparability as well as small area geographic comparability between the 1980 and 1970 censuses, the Office of Planning Data chose to rely on two summary data tape files available from the U.S. Bureau of the Census. Specifically, the recently released 1980 Census Summary Tape File (STF) 3A and the 1970 Census Fifth Count File C.

Subject Area Comparability

Appendix A of this report lists the titles of summary data tables that appear on the 1970 Fifth Count File C Tape. Each table presents summary data tabulated from responses to questions asked of the sample population. In the 1970 Census, every fifth housing unit and every fifth person in group quarters were designated to be in the sample. This 20-percent sample was subdivided into a 15-percent and a 5-percent sample by designating every fourth 20-percent sample unit as a member of the 5-percent sample. The remaining sample units were the 15-percent sample. The sample size for each 1970 Fifth Count table is identified in Appendix A.

Appendix B of this report lists the titles of summary data tables that appear on the 1980 Summary Tape File 3A. Each table presents summary data tabulated from responses to questions asked of the sample population. Two sampling rates were employed in the 1980 Census. One of every two housing units and persons in group quarters were sampled in incorporated places and minor civil divisions estimated to have had fewer than 2,500 persons. In all other places, one-sixth of the housing units or persons in group quarters were sampled. When both sampling rates are taken into account, approximately 16-percent of the housing units Statewide were sampled.*

The 1970 Fifth Count File C and the 1980 Summary Tape File 3A contain comparable information for a number of social, economic, and housing characteristics. The Office of Planning Data prepared a set of tape files with comparable tables for 1970 and

---

*Due to budget limitations, the Census Bureau only encoded 50% of the sample responses to the questions dealing with place of residence five years earlier and place of work.

1980. The tape files of comparable tables were created by matching tables from the original 1970 and 1980 tape files based on historic comparability, subject matter content, utilization of similar concepts and definitions, and use of the same or similar enumerated universes. Appendix C shows the subject content of the tables that appear in the comparable tape files created by matching data from the two Census Bureau tapes.

Exhibit 3 illustrates the relationship between the Office of Planning Data's 70-80 comparison files of tables and the Census Bureau's tables as they appear on the 1980 STF 3A and the 1970 Fifth Count File C tape files. Specifically, column 1 of Exhibit 3 lists the 70-80 comparison tables that appear in Appendix C and columns 2 and 3 identify the respective tables from the 1980 STF 3A (Appendix B) and the 1970 Fifth Count File C (Appendix A) which were used to create the respective 70-80 comparison tables.

The thirty-eight (38) summary tables and forty-four (44) detailed tables that appear in the body of this report for the State, planning regions, and counties are generated using either the 70-80 comparison tape file (Appendix C) or the 1980 Summary Tape File 3A. All the tables that show data for both 1980 and 1970 are created using the 70-80 comparison file. Those tables displaying 1980 data only are created using data from STF 3A only. Exhibit 4 shows the relationship between the detailed "printed output tables" that appear in this report and the "input tables" from either the 70-80 comparison file (Appendix C) or STF 3A (Appendix B). For example, the printed output table A.3. entitled "Persons in Households, 1980 and 1970" is generated using table 4 from the computerized 70-80 comparison tape file since it includes data for both 1980 and 1970. Alternatively the printed output table B.2. entitled "Years of School Completed by Age, 1980" is generated using tables 48 and 50 from STF 3A since it only contains data for 1980.

Geographic Area Comparability

Exhibit 5 shows the geographic hierarchy of records as they appear on the 1980 Summary Tape File 3A and the 1970 Fifth Count File C. The indentations in Exhibit 5 indicate the hierarchical order in which records for various geographic areas are presented on the respective tape files. For 1970, summary data for each table listed in Appendix A are presented on computer tape for each geographic area shown in Exhibit 5 for the Fifth Count File C. Similarly for 1980, summary data for each table listed in Appendix B are presented on computer tape for each geographic area shown in Exhibit 5 for Summary Tape File 3A.

As stated previously, the Office of Planning Data is interested in generating the printed output tables that appear in this report not only for the State, planning regions, and counties but also for smaller geographic areas such as minor civil divisions and census tracts. As shown in Exhibit 5, State and county as well as minor civil division and census tract records are available on the 1980 STF 3A tape file. The 1970 Fifth Count File C is the only 1970 tape file with subject content comparable to STF 3A for which data can be generated at the minor civil division and census tract levels. This file is, therefore, well suited to supporting 1970 and 1980 comparisons of social, economic, and housing characteristics at the smaller geographic area levels. However, as can be seen in Exhibit 5, State and county summary level records are not available on the 1970 Fifth Count File C.

EXHIBIT 3. RELATIONSHIP BETWEEN 70-80 COMPARISON FILE TABLES AND TABLES FROM THE 1980 (STF 3A) AND 1970 (5TH COUNT FILE C) CENSUS TAPES

Tables on 70-80 Comparison File (Appendix C)	1980 STF 3A Tables (Appendix B)	1970 5th Count File C Tables (Appendix A)

EXHIBIT 5. GEOGRAPHIC HIERARCHY OF THE 1980 STF 3A AND THE 1970 FIFTH COUNT FILE C

1980 STF 3A

- State
  - County
    - Minor Civil Division (MCD)
      - Place or Place segment within MCD or remainder of MCD
        - Census Tract or block numbering area (BNA) or untracted segment, within place, place segment, or remainder of MCD
          - Block group (BG) or BG segment or enumeration district (ED)

Place*
Congressional District*

1970 FIFTH COUNT FILE C

Tracted Areas	Outside Tracted Areas
Tract	Minor Civil Division
Block Group	Enumeration District

*Presented separately from hierarchically arranged summaries.

While recognizing that the 1970 Fifth Count File C does not contain State and county records, the Office of Planning Data chose this file for creating the 70-80 comparison files since it was well suited from a subject content standpoint and provided the opportunity for comparisons at small geographic area levels. To create 1970 data for the State and county geographic area levels, the small area data on this tape were aggregated to form State and county totals. This has led to the presence of a downward bias in the 1970 census data as it appears in this report due to suppression or withholding of data by the Census Bureau.

The Bureau procedurally suppresses data for some characteristics which are based on a small number of persons or housing units in a geographic area in order to insure that the data do not disclose information about particular individuals or housing units. Since suppression is more likely to occur at the smaller geographic areas (tracts, block groups, minor civil divisions, enumeration districts), the 1970 Fifth Count File C records contain more suppression then would have occurred had the same tables been presented for the higher level geographic areas such as the State or counties. Therefore, the aggregation of these smaller area records to form State and county records has resulted in more suppression than would have occurred had State and county level records been included directly on the 1970 Fifth Count File C.

To show the magnitude of the suppression that exists in the aggregated records, Exhibit 6 has been prepared. Exhibit 6 lists representative examples of data items that are included in this report for 1970. Following each item name is the rate at which it was sampled in 1970. The numeric value for each item is shown for the State of Maryland based on figures from a printed census publication as well as the aggregate value derived by summing up the small geographic areas that appear on the 1970 Fifth Count File C. The percentage difference between the figures from the reports and those obtained from the 1970 Fifth Count are also shown to illustrate how the magnitude of suppression varies depending on the data item being counted. The percentage difference ranges from zero, since total counts are not suppressed, to 2.15 percent for a housing unit item collected on a 5% sample.

In spite of the existence of suppression, the decision was made by the Office of Planning Data to proceed to use the 1970 Fifth Count File C for purposes of generating the 1970-1980 comparisons of social, economic, and housing characteristics since:

(1) This file is the best single source of subject area data for comparison to the 1980 STF 3A data.

(2) This file is the only 1970 file that can support small area (tract and minor civil division level) comparisons to the 1980 STF 3A data; and

(3) The amount of suppression is not significant enough to prevent meaningful comparisons between 1970 and 1980 data at the State and county levels.

In view of the fact that some suppression is present in the 1970 data when aggregated to the State and county levels, the analytic detail provided in the tables that appear in this report are generally measures of percentage distribution or cumulative percents of total for 1970 and 1980. Absolute and percentage change calculations between 1970 and 1980 are only computed where there are no suppression data or the suppression is negligible. The result is a report which does provide 1970 data as a reliable benchmark against which to compare the results of the 1980 census at the State, region, and county levels.

EXHIBIT 6. COMPARISON OF 1970 DATA ELEMENTS BY SOURCE FOR MARYLAND

Item	Census Bureau Reports*	1970 Fifth Count Aggregated Summaries	Percent Difference
Persons (20%)	3,922,399	3,922,399	—
In Households (20%)	3,817,582	3,817,387	—
16 Years Old and Over (20%)	2,683,627	2,683,060	0.02
Foreign Born (15%)	124,345	124,303	0.03

—Zero or less than one hundredth of a percent.

The Office of Planning Data is also able to produce computer printouts of the tables that appear in this report for smaller geographic areas. In order to make comparisons between 1970 and 1980 at the minor civil division, and particularly at the census tract level, geographically comparable areas had to be identified since the small geographic areas underwent some changes between 1970 and 1980. Geographically "equivalent" areas for 1970 and 1980 were established by combining minor civil divisions (Allegany County only) and census tracts where necessary. Appendix D shows the minor civil divisions for which the tables in this report are available. Appendix E shows the "census tract equivalents" for which the tables in this report are available. Persons interested in the tables for these smaller geographic areas can contact the Office of Planning Data at 301/383-5664.

Suppression Flags

As described earlier, the 1970 State and county data were derived by adding records for smaller geographic areas from the 1970 Fifth Count File C tape. Since some of the 1970 data for at least some of the small geographic areas are suppressed (i.e., too few items to assure confidentiality of the data and therefore not all true values are displayed for that summary table for that small geographic area), the resulting county and State counts do not represent the total count. To alert the users of this report to this problem, certain tables have an asterisk (*) next to a data item to indicate or flag the occurrence of suppression. If an asterisk appears anywhere on a given detailed table for a 1970 data item, then it can be assumed that there is at least some suppression of data for that table. The actual suppression could affect any or all of the 1970 data items for that table.

Suppression flags do not appear on all of the summary tables in section one. Instead, suppression flags only appear for those specific 1970 data items that have an asterisk in the corresponding detailed table. It should be assumed, however, that if a summary table is based on a detailed table where 1970 data is suppressed, then there is suppression associated with the 1970 data on the summary table as well.

Since the 1980 data in this report are based on State and county records as they appear on STF 3A, suppression is either non-existent or very rare. For this reason, suppression flags do not appear for any of the 1980 data items.

Median Income

Median income calculations appear on summary tables D-4, 5, and 6 (section one) as well as on detailed tables E-1, 2, 3, and 4 (sections two through nine). The medians that appear in this publication are calculated based on the frequency distribution of income as shown in the respective detailed tables (E-1, 2, 3, and 4). Linear interpolation inside the income interval that contains the median is used to determine the median value (i.e., the value that splits the total frequency into two equal parts).

There are three detailed tables showing the distribution of total family income in 1979 (sections two through nine tables E-2, 3, and 4) and three corresponding summary tables (section one tables D-4, 5, and 6). Since the income intervals for each of the detailed tables is different, the resulting 1979 family median income calculated using linear interpolation is different for each table. The Office of Planning Data chose to display each of the different calculated medians rather than to use only one of the median calculations. Each of the these tables is, thus, internally comparable since all the median calculations within a given table are calculated based on the same family income distribution. However, since detailed table E-3 has the most detailed distribution of family income, the median family income calculated for this table (also summary table D-5) is the most accurate.* Users of this report may, therefore, elect to only use the 1979 median family income measures that appear on these two tables (i.e., summary table D-5 and detailed table E-3).

The median income values that appear in this report may differ slightly from those appearing in census publications since those medians are often calculated based on an income distribution that is even more detailed than that shown in the tables of this report. The Office of Planning Data elected to calculate its own medians so that median values could be derived for both 1969 income distributions as well as for 1979 income distributions where median values are not available on the respective census tape files. Also, the geographic hierarchy on the census tapes often splits census tracts into more than one part. The only way to derive median values for entire tracts or census tract equivalent areas is to calculate them based on the frequency distribution.

Gini Ratio

Gini Ratios are calculated for the income distributions of households, families, and unrelated individuals in summary tables D-4, 5, and 6 of this report. As used in this report, the Gini Ratio is an indicator of "income inequality." The closer the ratio is to zero the greater the equality of the distribution of income among a population. A ratio of one would imply complete income inequality, i.e. all of the income would be concentrated in one person or family. The measure is calculated by determining the area between a diagonal line (complete income equality where, for example, 40% of the families would have 40% of the aggregate income) and the cumulative distribution of the actual relationship between a population and its income (where, for example, 40% of the families may only have 30% of the aggregate income). The ratio of this area to the total area under the diagonal line is the Gini Ratio. Appendix F provides a detailed explanation of the definition and derivation of this ratio.

There are three summary tables showing Gini Ratios for family income in 1979 (i.e., section one tables D-4, 5, and 6). The calculation of the Gini Ratio is very much dependent on the number of intervals in the income distribution, the income range within each interval and the frequency of occurrences within each interval. Each of the 1979 family income Gini Ratios is calculated based on the family income distribution as it appears in the detailed table referenced at the bottom of the respective summary tables. Since the income intervals for each of the detailed tables is different, the resulting 1979 family income Gini Ratios calculated for each of the summary tables is different. The Office of Planning Data chose to display each of the different calculated Gini Ratios rather than to use only one of the Gini Ratio calculations for all three summary tables.

---

*This is best illustrated for Montgomery County where the best estimate of the 1979 median family income is $33,871 (see summary table D-5 and detailed table E-3). The more abbreviated 1979 family income distributions result in estimates of 1979 median family income of $33,874 and $35,162 (see summary tables D-6 and D-4 and detailed tables E-4 and E-2 respectively).

Each of the summary tables is, thus, internally comparable since all the Gini Ratio calculations are based on the same family income distribution. However, since summary table D-5 is based on the detailed table (E-3) with the most detailed distribution of family income, the Gini Ratio for family income calculated for this table is the most accurate.* Users of this report may, therefore, elect to only use the 1979 family income Gini Ratio that appears on summary table D-5.

Race Categories

Several tables in this report provide data by race (specifically detailed tables A-2, A-5, B-1, B-5, C-1, E-4, F-3, H-1, H-3). Data by race are displayed in these tables for all races (total), as well as for white, black, and other races.** The data for the total, white, and black categories are obtained directly from the Census tape files. Where the "other races" appears on a table it is derived by subtracting white and blacks from the total category.

In Garrett County the non-white population is very small and 1980 data for a few of the tables containing information by race are suppressed. As a result, data by race may not appear in some of these tables for Garrett County. In other instances where data for whites is provided but not data for blacks, blacks have been included in the "all other" category. Finally, since the Western Maryland Region data is derived by aggregating the three counties - Allegany, Garrett, and Washington - similar changes to the tables containing race were made at the region level.

---

*This is best illustrated for Montgomery County where the best estimate of the 1979 family income Gini Ratio is .33722 (see summary table D-5). The more abbreviated 1979 family income distributions result in estimates of the 1979 family income Gini Ratio of .3753 and .4301 (see summary tables D-6 and D-4 respectively).

**Several of these tables also show persons of Spanish origin. Persons of Spanish origin may be of any race and, thus, represent a designation separate from race.

Section One: State, Regions, and Counties

APPENDIX A. 1970 FIFTH COUNT FILE C SUMMARY TAPE - LIST OF TABLES

Table Number	Table Title*
1	AGGREGATE $ INCOME - Aggregate $ Income
2	AGGREGATE $ INCOME BY FAMILY STATUS AND SIZE OF FAMILY AND RACE - Aggregate $ Family Income
3	URBAN/RURAL POPULATION - Count of Persons
4	RACE - Count of Persons
5	NATIVITY AND PARENTAGE (15%) - Count of Persons
6	MOTHER TONGUE (15%) - Count of Persons
7	COUNTRY OF ORIGIN OF FOREIGN STOCK (15%) - Count of Persons of Foreign Stock
8	AGE, RACE, AND SEX - Count of Persons
9	RELATIONSHIP AND RACE - Count of Persons
10	FAMILY TYPE, NUMBER OF OWN CHILDREN UNDER 18, AND RACE - Count of Families and Own Children Under 18
11	POPULATION 14 YEARS OLD AND OVER BY MARITAL STATUS AND SEX - Count of Persons 14+
12	POPULATION 3-34 YEARS OLD ENROLLED IN SCHOOL BY TYPE OF SCHOOL (15%) - Count of Persons 3-34 Years Old Enrolled in School
13	POPULATION 16-21 YEARS OLD BY ENROLLMENT AND WORK STATUS, RACE, AND SEX - Count of Persons 16-21 Years Old
14	POPULATION 25 YEARS OLD AND OVER BY YEARS OF SCHOOL COMPLETED AND AGE - Count of Persons 25+
15	POPULATION 5 YEARS OLD AND OVER BY RESIDENCE IN 1965 AND RACE (15%) - Count of Persons 5+
16	WOMEN 35-44 YEARS OLD EVER MARRIED AND CHILDREN EVER BORN - Count of Women 35-44 Years Old Ever Married
17	LABOR FORCE BY RACE AND SEX - Count of Persons 16+
18	EMPLOYED POPULATION 16 YEARS OLD AND OVER BY OCCUPATION - Count of Employed Persons 16+
19	EMPLOYED POPULATION 16 YEARS OLD AND OVER BY INDUSTRY - Count of Employed Persons 16+
20	INCOME - Count of Families, Count of Unrelated Individuals 14+
21	FAMILY STATUS AND SIZE OF FAMILY AND RACE - Count of Families
22	FAMILIES BY POVERTY STATUS AND PUBLIC ASSISTANCE - Count of Families
23	FAMILIES WITH FAMILY HEAD BY POVERTY STATUS AND RELATED CHILDREN UNDER 18 - Count of Families with Female Head
24	FAMILIES BY POVERTY STATUS AND RELATED CHILDREN UNDER 18 - Count of Families
25	UNRELATED INDIVIDUALS BY POVERTY STATUS - Count of Unrelated Individuals 14+
26	POVERTY STATUS AND AGE - Count of Persons
27	RELATED CHILDREN UNDER 18 YEARS OLD BY POVERTY STATUS AND PRESENCE OF PARENTS - Count of Related Children Under 18 Years Old
28	URBAN/RURAL HOUSING - Count of Occupied and Vacant Year-Round Housing Units
29	COUNT OF ALL HOUSING UNITS
30	TENURE AND VACANCY STATUS - Count of Occupied and Vacant Year-Round Housing Units
31	TENURE AND RACE OF HEAD - Count of Occupied Units
32	PERSONS IN UNIT AND TENURE - Count of Occupied Units
33	PERSONS PER ROOM, TENURE, RACE OF HEAD - Count of Occupied Units
34	UNITS LACKING ONE OR MORE PLUMBING FACILITIES BY TENURE, RACE OF HEAD - Count of Occupied and Vacant Year-Round Housing Units Lacking One or More Plumbing Facilities
35	UNITS WITH 1.01 OR MORE PERSONS PER ROOM AND WITH ALL PLUMBING FACILITIES BY TENURE, RACE OF HEAD - Count of Occupied Units with All Plumbing Facilities and with 1.01 or More Persons Per Room
36	UNITS LACKING DIRECT ACCESS AND COMPLETE KITCHEN FACILITIES BY TENURE - Count of Occupied and Vacant Year-Round Housing Units Lacking Direct Access and Complete Kitchen Facilities

---

*All tabulations not otherwise indicated represent 20% Sample. Those indicated as 20% tabulations for Spanish Americans were tabulated on a 15% basis.

APPENDIX A. (Continued)

Table Number	Table Title[*]
37	ROOMS IN UNIT AND TENURE - Count of Occupied and Vacant Year-Round Housing Units
38	UNITS FOR RENT THAT HAVE BEEN VACANT LESS THAN 2 MONTHS - Count of Year-Round Vacant-For-Rent Units Vacant Less than 2 Months
39	UNITS FOR SALE ONLY THAT HAVE BEEN VACANT LESS THAN 6 MONTHS - Count of Year-Round Vacant-For-Sale only Units Vacant Less than 6 Months
40	VALUE - Count of Owner Occupied Units for which Value is Tabulated
41	GROSS RENT - Count of Renter Occupied Units for which Rent is Tabulated
42	TELEPHONE AVAILABLE AND TENURE - Count of Occupied Units
43	BASEMENT AND TYPE OF STRUCTURE - Count of Occupied and Vacant Year-Round Housing Units
44	TYPE OF STRUCTURE AND TENURE - Count of Occupied and Vacant Year-Round Housing Units
45	YEAR STRUCTURE BUILT AND TENURE - Count of Occupied and Vacant Year-Round Housing Units
46	UNITS WITH SELECTED EQUIPMENT BY TENURE (15%) (20%) - Count of Occupied and Vacant Year-Round Housing Units with Selected Equipment
47	YEAR MOVED INTO UNIT AND TENURE (15%) - Count of Occupied Units
48	UNITS WITH AUTOMOBILES AVAILABLE BY TENURE (15%) - Count of Occupied Units with Automobiles
49	FAMILY OR PRIMARY INDIVIDUAL INCOME AND VALUE - Count of Owner Occupied Units for which Value is Tabulated
50	INCOME AND GROSS RENT AS PERCENTAGE OF FAMILY OR PRIMARY INDIVIDUAL INCOME - Count of Renter Occupied Units for which Rent is Tabulated
51	UNITS WITH HOUSEHOLD EQUIPMENT (15%) - Count of Occupied Units with Household Equipment
52	HEATING FUEL (5%) - Count of Occupied Units
53	COOKING FUEL (5%) - Count of Occupied Units

---

[*] All tabulations not otherwise indicated represent 20% Sample. Those indicated as 20% tabulations for Spanish Americans were tabulated on a 15% basis.

APPENDIX B. 1980 SUMMARY TAPE FILE 3A -LIST OF TABLES

Table Number	Table Title
1	URBAN AND RURAL - Persons
2	UNWEIGHTED SAMPLE COUNT OF PERSONS
3	100-PERCENT COUNT OF PERSONS

43	PRIVATE VEHICLE OCCUPANCY - Workers 16+ who Travelled to Work by Car, Truck, or Van
44	SCHOOL ENROLLMENT - Persons 3+ Enrolled in Private School
45	RACE BY SCHOOL ENROLLMENT - Persons 3+ Enrolled in School
46	SCHOOL ENROLLMENT - Persons of Spanish Origin 3+ Enrolled in School
47	SCHOOL ENROLLMENT, YEARS AND SCHOOL COMPLETED AND LABOR FORCE STATUS - Persons 16 to 19 Years Old
48	RACE BY YEARS OF SCHOOL COMPLETED - Persons 25+
49	YEARS OF SCHOOL COMPLETED - Persons of Spanish Origin 25+
50	YEARS OF SCHOOL COMPLETED - Persons 18+
51	SEX BY VETERAN STATUS - Civilian Persons 16+
52	PERIOD OF SERVICE - Civilian Veterans 16+
53	WORK DISABILITY STATUS - Noninstitutional Persons 16 to 64
54	AGE BY PUBLIC TRANSPORTATION DISABILITY STATUS - Noninstitutional Persons 16+
55	RACE BY SEX BY LABOR FORCE STATUS - Persons 16+
56	SEX BY LABOR FORCE STATUS - Persons of Spanish Origin 16+
57	PRESENCE AND AGE OF OWN CHILDREN BY LABOR FORCE STATUS - Females 16+ with One or More Own Children
58	SEX BY LABOR FORCE STATUS IN 1979 - Persons 16+

APPENDIX B. (Continued

Table Number	Table Title
59	SEX BY USUAL HOURS WORKED PER WEEK IN 1979 BY WEEKS WORKED IN 1979 - Persons 16+ who Worked in 1979
60	AGGREGATE WEEKS WORKED IN 1979 BY SEX - Persons 16+ who Worked in 1979
61	WEEKS UNEMPLOYED IN 1979 - Persons 16+ with Unemployment in 1979
62	RACE BY SEX - Persons 16+ with Unemployment in 1979
63	SEX - Persons of Spanish Origin 16+
64	AGGREGATE WEEKS UNEMPLOYED IN 1979 BY SEX - Persons 16+ with Unemployment in 1979
65	INDUSTRY - Employed Persons 16+
66	OCCUPATION - Employed Persons 16+
67	CLASS OF WORKER - Employed Persons 16+
68	HOUSEHOLD INCOME IN 1979 - Households
69	MEDIAN HOUSEHOLD INCOME IN 1979 - Households
70	AGGREGATE HOUSEHOLD INCOME IN 1979 - Households
71	INCOME TYPE IN 1979 - Households with Income
72	AGGREGATE HOUSEHOLD INCOME IN 1979 BY INCOME TYPE IN 1979 - Households with Income
73	FAMILY INCOME IN 1979 - Families
74	MEDIAN FAMILY INCOME IN 1979 - Families
75	RACE BY FAMILY INCOME IN 1979 - Families with Householder of Specified Races
76	FAMILY INCOME IN 1979 - Families with Householder of Spanish Origin
77	AGGREGATE FAMILY INCOME IN 1979 BY RACE OF HOUSEHOLDER - Families
78	AGGREGATE FAMILY INCOME IN 1979 - Families with Householder of Spanish Origin
79	WORKERS IN FAMILY IN 1979 - Families
80	AGGREGATE FAMILY INCOME IN 1979 BY WORKERS IN FAMILY IN 1979 - Families
81	INCOME IN 1979 - Unrelated Individuals 15+
82	MEDIAN INCOME IN 1979 - Unrelated Individuals 15+
83	AGGREGATE INCOME IN 1979 - Persons 15+
84	AGGREGATE INCOME IN 1979 BY INMATE STATUS - Persons 15+
85	PER CAPITA INCOME IN 1979 BY INMATE STATUS - Persons
86	FAMILY TYPE BY POVERTY STATUS IN 1979 BY PRESENCE AND AGE OF RELATED CHILDREN - Families
87	POVERTY STATUS IN 1979 BY PRESENCE AND AGE OF RELATED CHILDREN - Families with One or More Related Children
88	POVERTY STATUS IN 1979 BY AGE OF HOUSEHOLDER - Families
89	POVERTY STATUS IN 1979 BY AGE OF HOUSEHOLDER - Nonfamily Householders
90	POVERTY STATUS IN 1979 BY AGE - Unrelated Individuals
91	RACE BY POVERTY STATUS IN 1979 - Persons
92	POVERTY STATUS IN 1979 - Persons of Spanish Origin
93	POVERTY STATUS IN 1979 BY AGE - Persons for Whom Poverty Status is Determined
94	POVERTY STATUS IN 1979 BY HOUSEHOLD RELATIONSHIP AND AGE - Persons in Families Excluding Householders
95	POVERTY STATUS IN 1979 - Persons for Whom Poverty Status is Determined
96	VACANCY STATUS - Vacant Housing Units
97	TENURE - Occupied Housing Units
98	TENURE BY RACE OF HOUSEHOLDER - Occupied Housing Units
99	TENURE - Occupied Housing Units with Householder of Spanish Origin
100	TENURE - Persons in Occupied Housing Units
101	AGGREGATE ROOMS - Year-Round Housing Units
102	TENURE AND OCCUPANCY STATUS BY UNITS IN STRUCTURE - Year-Round Housing Units
103	UNITS IN STRUCTURE - Vacant Seasonal and Migratory Housing Units
104	TENURE BY UNITS IN STRUCTURE - Persons in Occupied Housing Units
105	STORIES IN STRUCTURE - Year-Round Housing Units
106	PASSENGER ELEVATOR - Year-Round Housing Units in Structure with 4 or More Stories
107	SOURCE OF WATER - Year-Round Housing Units
108	SEWAGE DISPOSAL - Year-Round Housing Units
109	TENURE AND OCCUPANCY STATUS BY YEAR STRUCTURE BUILT - Year-Round Housing Units
110	TENURE BY YEAR HOUSEHOLDER MOVED INTO UNIT - Occupied Housing Units
111	HEATING EQUIPMENT - Year-Round Housing Units
112	HOUSE HEATING FUEL - Occupied Housing Units
113	COOKING FUEL - Occupied Housing Units
114	WATER HEATING FUEL - Occupied Housing Units

APPENDIX B. (Continued)

Table Number	Table Title
115	KITCHEN FACILITIES - Year-Round Housing Units
116	TENURE AND OCCUPANCY STATUS BY BEDROOMS - Year-Round Housing Units
117	TENURE AND OCCUPANCY STATUS BY BATHROOMS - Year-Round Housing Units
118	TENURE BY TELEPHONE IN HOUSING UNIT - Occupied Housing Units
119	AGE OF HOUSEHOLDER BY TELEPHONE IN HOUSING UNIT - Occupied Housing Units with Householders of Selected Ages
120	AIR CONDITIONING - Year-Round Housing Units
121	RACE OF HOUSEHOLDER - Occupied Housing Units with No Vehicle Available
122	OCCUPIED HOUSING UNITS WITH HOUSEHOLDER OF SPANISH ORIGIN WITH NO VEHICLE AVAILABLE
123	VEHICLES AVAILABLE - Occupied Housing Units with Vehicle Available
124	GROSS RENT - Specified Renter Occupied Housing Units
125	RACE OF HOUSEHOLDER BY GROSS RENT - Specified Renter Occupied Housing Units with Householder of Specified Races
126	GROSS RENT - Specified Renter Occupied Housing Units with Householder of Spanish Origin
127	MEDIAN GROSS RENT - Specified Renter Occupied Housing Units Paying Cash Rent
128	AGGREGATE GROSS RENT - Specified Renter Occupied Housing Units Paying Cash Rent
129	AGGREGATE CONTRACT RENT AND RENT ASKED BY OCCUPANCY STATUS - Specified Renter Occupied Paying Cash Rent and Vacant-For-Rent Housing Units
130	OCCUPANCY STATUS - Specified Renter Occupied Paying Cash Rent and Vacant-For-Rent Housing Units
131	INCLUSION OF UTILITIES IN RENT - Specified Renter Occupied Housing Units

Total	318	319	320	321	322

---

[*] Not Available for 1970.

[**] Data element needs to be multiplied by 100.

[***] For 1980 "With Related Children" is derived by summing the following three subcategories: (1) Under 6 Years and 6 to 17, (2) Under 6 Years Only and (3) 6 to 17 Years Only. For example, "All Families with Related Children" equals "247 + 250 + 253" in 1980. In 1970, "With Related Children" is actually stored in the data position for "Under 6 Years and 6 to 17." For example, "All Families with Related Children" equals "247" in 1970.

APPENDIX C. (Continued)

APPENDIX F. EXPLANATION OF LORENZ CURVE AND GINI RATIO

Calculation of Estimates for the Lorenz Curve and Gini Ratio

The Lorenz Curve and Gini Ratio are used to measure inequalities in the distribution of income. Their mathematical representation can best be illustrated by use of an example.

Exhibit F.1. shows the intervals for which household income data for all households in Maryland in 1979 are displayed (Summary Tape File 3A). Column 1 of Exhibit F.1. is the number of households with income in a particular income interval. Column 2 is the estimate of the aggregate income (in thousands) for the households in each of the income intervals.* The proportion and cumulative proportion of households are shown in columns 3 and 5 respectively. For example, 7.0% of all households in Maryland in 1979 earned between $20,000 and $22,499 (column 3) and 56.2% of all households earned $22,499 or less (column 5). The estimates for the proportion and cumulative proportion of aggregate household income are shown in columns 4 and 6 respectively. Continuing the same example, aggregate income for all households in the $20,000-$22,499 interval represents approximately 6.3% of all income (column 4) and the aggregate income for all households with income of $22,499 or less represents approximately 28.2% of all income (column 6).

The estimate for the Lorenz Curve is obtained by plotting the cumulative proportion of all households (column 5) against the cumulative proportion of all income (column 6). The graph of this plot is shown in Exhibit F.2. The curved line is the Lorenz Curve. For purposes of comparison, a diagonal line is drawn at 45°. The diagonal line represents the condition of equal distribution (i.e., a given proportion of households has the same proportion of total income). Since the Lorenz Curve is below the 45° line, household income is not equally distributed.

The Gini Ratio is a measure of just how much inequality there is in the distribution of income. The ratio is determined by taking the area between the 45° line and the Lorenz Curve and dividing it by the entire area under the 45° line. The Gini Ratio can range from 0, complete equality where the Lorenz Curve is the same as the 45° line, to 1, complete inequality where all income is concentrated in 1 unit (in our example, one household). Thus, the closer the Gini Ratio is to zero the greater the equality of income distribution.

---

*Since the Census Bureau does not provide aggregate income for each income interval, estimates were computed by multiplying the number of households by the mid-point of the respective income interval. For the open ended interval ($75,000 or more) the average for the interval was computed by logarithmic transformation (pareto curve formula).

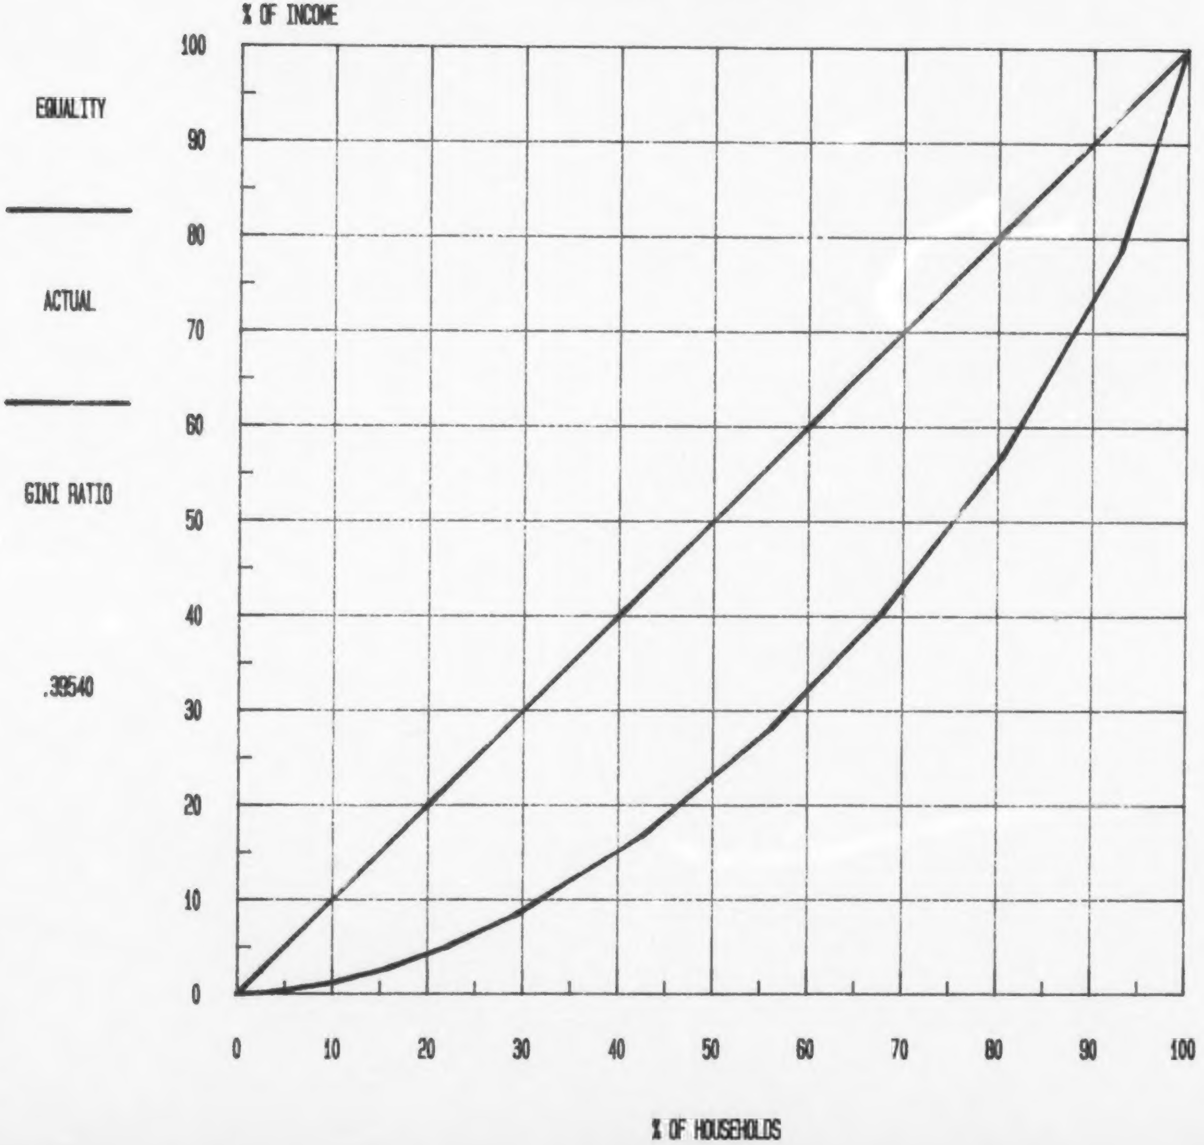
GINI RATIO = 4.5701813 - 4.1748973 = .39528

* TOTAL INCOME FOR EACH INTERVAL COMPUTED BY MULTIPLYING NUMBER OF HOUSEHOLDS BY MID-POINT OF THE INTERVAL. FOR THE OPEN END INTERVAL AVERAGE INCOME COMPUTED BY LOGARITHMIC TRANSFORMATION - PARETO CURVE FORMULA.

EXHIBIT F.2.

INCOME DISTRIBUTION OF HOUSEHOLDS

LORENZ CURVE, MARYLAND



The actual technique for calculation of the Gini Ratio is shown in Exhibit F.1., columns 7 and 8.

> Column 7 - this column is calculated by multiplying the first cumulative proportion in column 5 by the second cumulative proportion in column 6 and so on down the column. The sum of column 7 is then generated by adding all the resulting terms.
>
> Column 8 - this column is calculated by multiplying the second term in column 5 by the first term in column 6 and so on down the column. The sum of column 8 is then generated by adding all the resulting terms.

The Gini Ratio is then determined by subtracting the sum of column 8 from the sum of column 7. Mathematically, the above steps can be expressed as follows:

$$\text{Gini Ratio} = \sum_{i=1}^{n-1} X_i Y_{i+1} - \sum_{i=1}^{n-1} X_{i+1} Y_i$$

n = number of income intervals
X_i = cumulative proportion of households in the i^{th} income interval
Y_i = cumulative proportion of income in the i^{th} income interval

Limitations on the Estimation of the Lorenz Curve and Gini Ratio

Estimating the values necessary to plot the Lorenz Curve and calculate the Gini Ratio are very much dependent on (1) the number of intervals in the income distribution, (2) the income range within each interval and the frequency of actual occurrences within each interval, (3) the aggregate income within each of the income intervals, and (4) the calculation of the area between the estimated Lorenz Curve and the 45° line.*

The possible impact of these factors is described briefly below:

---

*For a more complete discussion of these and other problems in estimating the Lorenz Curve and Gini Ratio see:

Gastwirth, Joseph L., "The Estimation of the Lorenz Curve and Gini Ratio," The Review of Economics and Statistics, Volume 54 (August 1972), 306-316.

1. Number of intervals in the income distribution - the greater the number of income intervals the more likely it is that the estimated Gini Ratio will approximate the true value since the actual Lorenz Curve is likely to be more accurately estimated.

2. Income range within each interval - the selection of income ranges for the intervals that more closely approximate the underlying distribution of the income of the population of interest will result in the estimated Gini Ratio more closely approximating the true value.

3. The aggregate income within each interval - the use of the midpoint of each income interval (with a pareto-tail fitted to the last interval) to estimate the aggregate income for each interval introduces some error in the calculation of the Gini Ratio. Availability of the true mean income for each interval improves the estimate of the Gini Ratio by enabling the true aggregate income for each interval to be calculated.

4. Approximating the area between the Lorenz Curve and the 45° line - the true Lorenz Curve is convex in shape. The estimated Lorenz Curve is really a series of straight lines based on the cumulative distributions of "households" and "income" based on the income intervals. The resulting estimated Lorenz Curve lies slightly above the actual Lorenz Curve. This tends to slightly underestimate the area between the curve and the 45° line. As a result, the estimated Gini Ratio calculated using the estimated Lorenz Curve is really a lower bound for the real Gini Ratio (assuming error introduced by 1, 2, and 3 is minimal or non-existent).

Exhibit F.3. shows each of the Gini Ratios estimated in this report with a reference to the section one summary table where the Gini Ratio appears. In the exhibit, each of the four factors that can impact on the calculation of the estimated Gini Ratio are referenced. All the estimated Gini Ratios are affected by the problems associated with factors three and four. Also, a number of the estimated Gini Ratios are likely to be affected by factor one (too few intervals) and factor two (intervals with a large range and open ended intervals with large numbers of occurrences).

Gini Ratios for family income in 1979 appear in three summary tables (D-4, D-5, D-6) based on three different numbers of income intervals.

EXHIBIT F.3. CHARACTERISTICS OF GINI RATIOS CALCULATED IN THIS REPORT

Gini Ratio (Summary Table)	1. Number of Income Intervals (Detailed Table)	2. Income Range Within Intervals		3. Use Midpoint to Estimate Mean Income for Each Interval	4. Use Estimated Curve Resulting in Lower Bound for Gini Ratio
		Income Interval With Largest Range	Open Ended Interval		
Household and Family Income:					
1979 Households (D-5)	16 (E-3)	$50,000-74,999	$75,000 or more	Yes	Yes
1979 Non-Family Households (D-5)	16 (E-3)	$50,000-74,999	$75,000 or more	Yes	Yes
1979 Families (D-5)	16 (E-3)	$50,000-74,999	$75,000 or more	Yes	Yes
Family Income by Race 1979:					
All Races (D-6)	9 (E-4)	$35,000-49,999	$50,000 or more	Yes	Yes
White (D-6)	9 (E-4)	$35,000-49,999	$50,000 or more	Yes	Yes
Black (D-6)	9 (E-4)	$35,000-49,999	$50,000 or more	Yes	Yes
Other (D-6)	9 (E-4)	$35,000-49,999	$50,000 or more	Yes	Yes
Comparative Income:					
1979 Families (D-4)	6 (E-2)	$25,000-49,999	$50,000 or more	Yes	Yes
1969 Families (D-4)	6 (E-2)	$25,000-49,999	$50,000 or more	Yes	Yes
1979 Unrelated Individuals (D-4)	15 (E-1)	$25,000-49,999	$50,000 or more	Yes	Yes
1969 Unrelated Individuals (D-4)	15 (E-1)	$25,000-49,999	$50,000 or more	Yes	Yes

The best estimate of the 1979 family income Gini Ratio is that found in summary table D-5 based on sixteen income intervals. The estimates in summary tables D-4 and D-6 are likely to be less accurate, particularly for those jurisdictions with a high proportion of families in the upper income intervals (e.g., Montgomery and Howard counties). The Gini Ratio for family income in 1969 (calculated based on 6 intervals) is likely to be a better estimate than the Gini Ratio for family income in 1979 (calculated based on 6 intervals) since income in 1969 was concentrated more heavily in the lower income intervals. Therefore, a comparison of the 1969 family income Gini Ratio (Summary Table D-4) to the 1979 family income Gini Ratio based on sixteen intervals (Summary Table D-5) might be prefereable.

APPENDIX G. GLOSSARY OF TERMS

This appendix defines those terms useful in understanding the data and concepts used in the tables which appear in sections one through nine of this report.

The glossary was prepared, in large part, by adapting materials from the U.S. Bureau of the Census' 1980 Census of Population and Housing User's Guide. Only terms related to the collection, tabulation, and presentation of census data for Maryland are included in the glossary.

An index to the glossary of terms precedes the listing of the terms and their meaning. The index groups the terms into four major categories:

Population Terms
Housing Terms
Geographic Area Terms
Statistical and Technical Terms

In the index, each term is listed under one of the above categories. For the population and housing terms, reference is made to the applicable detailed table(s) (and table reference number(s)) where the term is used. The index includes for all terms the number for the term as it appears in the glossary. This is provided as an aid in locating the term in the glossary.

INDEX TO GLOSSARY OF TERMS

Term	Glossary Term Number	Reference to Applicable Detailed Table (Reference Page)
POPULATION TERMS		
Age	1	B-5 (p. 6), F-4 (p. 15)
Class of Workers	8	D-1 (p. 10)

GLOSSARY OF TERMS

1. AGE. Age at last birthday, i.e., number of completed years from birth to April 1, 1980, based on replies to a question on month and year of birth. This item was asked on a complete-count basis.

   Age is tabulated by single years of age and by many different groupings, such as 5-year age groups. Basic records identify single years (and quarter years on sample basic records) to 112. Public-use microdata samples show single years and quarters to 99, and 100 years or more.

   Limitations: In previous censuses, undercoverage of the population has been associated with age. Young adults, especially Black males, were missed at a higher rate than other segments of the population.

   Historical comparability: Age data have been collected in each census since 1790. Counts in 1970 and 1980 for persons 100 years old and over were substantially overstated.

2. AIR CONDITIONING. Presence of equipment with a refrigeration unit to cool air in occupied and vacant housing units. Evaporative coolers and fans or blowers not connected to a refrigerating apparatus are excluded, but refrigerating heat pumps are included. This item was asked on a sample basis.

   Central system. A central installation designed to deliver cooled air to a number of rooms in a house or apartment. The system may have individual room controls.

3. AUTOMOBILES AVAILABLE. The number of passenger cars available at home for the use of the members of the household, ascertained for occupied housing units. The term automobile includes station wagons, but excludes vans, pickups, or larger trucks. Cars rented or leased for one month or more, company cars, and police and government cars are also included if kept at home and used for nonbusiness purposes. (Household members include lodgers or other nonrelatives lining in the unit.)

   Dismantled or dilapidated cars or immobile cars used only as a source of power for some piece of machinery are excluded from this category. The statistics do not measure the number of automobiles privately owned or the number of households owning automobiles. This item was asked on a sample basis.

   Limitations: A test survey taken before the census showed that the percent of households with three or more cars was understated.

   Historical comparability: Similar data have been collected since 1960. Earlier counts, however, excluded taxicabs.

4. BLOCK. Normally a rectangular piece of land, bounded by four streets. However, a block may also be irregular in shape or bounded by railroad tracks, streams, or other features. Blocks do not cross the boundaries of counties, census tracts, or block numbering areas (BNA's). They may cross place boundaries and the boundaries of minor civil divisions (MCD's).

   Census blocks are normally compact units, but there are important exceptions. For example, in some suburbs, houses cluster around cul-de-sacs. In these areas a census block may be fairly large since only those features that serve as the perimeter of an enclosed areas are treated as block boundaries. Also, in those rural areas where they are numbered, blocks may include many square miles, depending on the frequency of intersections of roads, rivers, mountain ridges, or other physical features.

   Census data are tabulated by block in all urbanized areas (UA's) and generally for some territory extending beyond the UA boundaries. Data also are tabulated by block in incorporated places with 10,000 or more inhabitants outside UA's, and in other areas which contracted with the Census Bureau for the preparation of block statistics. Places outside of UA's are included in the block statistics program if they met the 10,000 population criterion in the 1970 census, in official Bureau estimates through 1976, or in a special census taken on or before December 31, 1977. Block coverage for qualifying places is within boundaries as of January 1, 1980.

   Historical comparability: In 1970, block statistics were prepared for UA's (and some territory beyond) located in SMSA's existing at the time of the census, as well as for contract areas. Unlike 1980, they were not prepared for places of 10,000 population or more outside UA's unless done under contract, nor for UA's in not-yet-defined SMSA's. Some blocks defined for 1970 will have new boundaries in 1980, primarialy those on the edges of UA's and other areas of new development where the street patterns have changed. To help the user notice a change wherever a block has been redefined by splitting or other adjustment, the 1970 block number will generally not be reused. Where blocks were recognized for the 1970 census, their boundaries and numbers generally will be the same in 1980, except for a few areas where blocks were renumbered by local GBF/DIME-File coordinating agencies in order to define more desirable block groups.

5. BLOCK GROUP (BG). A combination of numbered census blocks that is a subdivision of a census tract or block numbering area (BNA) and is defined in all areas for which block statistics are prepared. (In areas where blocks are not numbered, ED's are used instead of BG's.)

   BG's are defined within census tract or BNA. They may cross, and be split by, the boundaries of minor divil divisions (MCD's), places, congressional districts, urbanized areas, and Indian reservations. When this occurs, statistical summaries (data records) are provided for each component or part.

   Historical comparability: In areas where BG's were tabulated in 1970, many 1980 BG's will be the same as their 1970 counterparts, with exceptions occurring primarily in areas where tract boundaries have changed or where substantial development has taken place. Also, BG parts, created when BG's are split by the boundaries of higher level areas, will change if such boundaries have changed.

   Many areas with BG's in 1980 had data reported by ED's in 1970, a change occasioned in part by the expansion of the block statistics program, and in part because ED's were used for tabulation purposes in 1970 instead of BG's in some block-numbered areas. Where BG's have replaced ED's, there will be little comparability between 1970 ED's and 1980 BG's.

6. BLOCK NUMBERING AREA (BNA). An area defined for the purpose of grouping and numbering blocks in block-numbered areas where census tracts have not been defined - typically, in nonSMSA places of 10,000 or more population and in contract block areas. BNA's do not cross county boundaries.

   Historical comparability: While BNA's were also used in previous censuses, any historical comparability is generally coincidental.

7. CENSUS TRACT. A small statistical subdivision of a county. Tracts generally have stable boundaries. When census tracts are established, they are designed to be relatively homogeneous areas with respect to population characteristics, economic status, and living conditions. Tracts generally have between 2,500 and 8,000 residents.

   Census tracts are identified by a 4-digit basic code and may have a 2-digit suffix, e.g., 6059.02. On tape, the decimal is implied. Many census tracts do not have a suffix. In such cases, tapes give the 4-digit code followed by two blanks. Leading zeros in a tract number (e.g., 0025.02) do not appear on the maps (e.g., 25.02).

   Tract numbers are always unique within a county and are also unique within an SMSA in Maryland. All valid census tract numbers are in the range 0001 to 9899.99; a number between 9901 and 9989.99 denotes a block numbering area (BNA).

   Historical comparability: Census tracts are defined with an overall goal of census-to-census comparability. Some 1970 tracts have been subdivided due to increased population, but the new tracts can be recombined by the user for comparison with 1970 tracts. Other changes have included combinations of two or more small 1970 tracts and adjustments to tract boundaries where old boundary features have disappeared or better boundaries (e.g., freeways) have come into being. In a few areas, local Census Statistical Areas Committees undertook extensive redefinition of census tracts.

8. CLASS OF WORKER. Classification of workers according to the type of ownership of the employing organization. Class of worker is generally tabulated for employed persons 16 years old and over. The determination of class of worker is independent of occupation and industry classifications, but refers to the same job. These data were collected on a sample basis.

   a. Private wage and salary workers. Employees of a private company, business, or individual who work for wages, salary, commissions, tips, or payment in kind. Work for wages or salary from settlement houses, churches, unions, and other nonprofit organizations is also included, as are those self-employed persons whose business is incorporated.

   b. Employee of own corporation. Persons who own all or most of the stock in a privately held corporation and often consider themselves to be self-employed. In fact, they are classified as private wage and salary workers.

   c. Government workers. Persons who work for any governmental unit regardless of the activity of the particular agency. Employees of public schools, government-owned bus lines, government-owned electric power utilities, etc. are included, but employees of private organizations which do contract work for government agencies are not included.

      Government workers include persons elected to paid offices. Persons on active duty in the Armed Forces are assigned a Federal government class of worker code in the computer editing operation; however, the Bureau's class-of-worker tabulations are limited to civilians. The "government workers" category is subdivided by the level of government: Federal government workers, State government workers, and local government workers.

      In some States, teachers in elementary and secondary schools, who are local government workers, tend to report themselves as State government workers. The result is likely to be an overstatement of the number of State government workers.

   d. Self-employed workers. Persons who work for profit or fees in their own unincorporated business, profession, or trade, or who operate a farm. Included here are the owner-operators of large stores and manufacturing establishments as well as small merchants, independent craftspersons and professionals, farmers, peddlers, and other persons who conduct enterprises on their own. Persons whose own business is incorporated are counted as employees of their corporation and are tabulated in the "private wage and salary workers" category.

   e. Unpaid family workers. Persons who work without pay on a farm or in a business operated by a person to whom they are related by blood or marriage. These are usually the children or the spouse of the owner of a business or farm. About one-half of the unpaid family workers are farm laborers. Unpaid family workers who reported working fewer than 15 hours during the reference week were not considered to be "at work" in the determination of labor force status.

   Historical comparability: Class-of-worker data have been collected since 1940. Level of government and "employee of own corporation" were not collected as separate categories before 1970. Since persons who reported being employees of their own corporations were counted in 1970 and 1980 as private wage and salary workers, there is probably an overstatement of the self-employed category in figures for 1940 to 1960. 1970 and 1980 data are comparable.

9. COMPLETE COUNT. Data obtained from the entire population and all housing units. Those questions asked of everyone (i.e., those which appear on both the short and long forms) are known as "complete-count questions." "Complete-count data" are tabulations of questions which are based on responses drawn from all questionnaires, i.e., 100 percent. Responses to the complete-count questions on the long forms may be tabulated alone or in cross-classification with responses to sample questions on the long form. The resulting figures are sample data, that is, estimates rather than complete counts.

10. CONDOMINIUM STATUS. A type of ownership of an apartment in a building - or a house in a development - where ownership of common areas is shared. This item was asked on a complete-count basis.

    a. Condominium. Ownership that enables a person to own an apartment or house in a development of similar units and hold a common or joint-ownership in common areas, hallways, entrances, elevators, etc. The owner has a deed to the individual unit, and, very likely, a mortgage on the unit, and also holds a common or joint ownership in all common areas, such as grounds, lobbies, and elevators. A condominium unit need not be occupied by the owner to be counted as such.

    b. Noncondominium. All other types of ownership, including cooperative where a share in a corporation with title to a multi-unit property entitles the owner to occupy a specific unit.

10. CONDOMINIUM STATUS. (Continued)

Limitations: In a test survey taken before the census, an overstatement of condominiums was noted. Therefore, an edit was introduced in the 1980 census voiding apparently supurious condominium responses in blocks or enumerations districts with a very small number of such responses on the assumption that condominium units can occur only in groups of several condominium units.

Historical comparability: In 1970, owner-occupied cooperative and condominium housing units were identified together. In 1980, only condominium units are identified. The 1980 item also includes vacant and renter-occupied units, not just owner-occupied condominium housing units as in 1970.

11. COUNTY. The primary political and administrative subdivision of a State. Baltimore City, Maryland is independent of any county organization, and constitutes a primary division of the State and is treated the same as a county in census tabulations.

12. ENERGY COSTS, MONTHLY RESIDENTIAL. The average monthly expense for fuels and utilities in occupied housing units. Fuels include oil, coal, wood, kerosene, and other fuels; utilities include electricity, gas, and water. Costs are recorded if paid by or billed to occupants, a welfare agency, relatives, or friends. Costs paid by landlords or included in condominium or cooperative fees are excluded. Also excluded are payments by occupants for fuel bills other than their own. Water and fuel costs are converted from a yearly basis as reported, to a monthly basis.

Utility and fuel costs are used primarily as components of "Gross Rent: and "Selected Monthly Owner Costs." Since utilities included in rent payments are not recorded, residential energy cost data for renter-occupied units are of limited value for direct study. For that reason, separate fuel and utility cost figures are not issued in the more widely circulated census reports, but only on summary tapes.

Limitations: A sample taken before the census showed that respondent's estimates were overstated as compared with utility company records.

Historical comparability: Similar data were collected for renters only in 1960 and 1970. Directions implied in the 1970 format were made explicit to respondents in 1980: "The amounts to be reported should be for the last 12 months, that is, for electricity and gas, the monthly average for the past 12 months; for water and other fuels, the total amount for the last 12 months." The expression "included in rent" was expanded to "included in rent or no charge."

13. ENUMERATION DISTRICT (ED). An area used in the 1980 census for data collection activities and as a tabulation area where blocks are not present. ED's do not cross the boundaries of legal or statistical areas; for example, census tracts, MCD's, places, counties, congressional districts, and States. Because of these constraints, they vary widely in population size, although they do not generally exceed a population of 1,600 in areas where the census was taken by mail, or a population of 1,000 in areas where the census was taken by conventional enumerator canvassing. The population limits are designed so that an ED generally represents reasonable workload for one enumerator.

About 1,000 jurisdictions in 47 States participated in a program for local definition of ED's. In areas without blocks, ED's are the smallest unit of census geography for which statistics are prepared.

ED boundaries are shown on MMS/VMS, place, and county maps in areas where there are no block numbers. ED's are identified by a 4-digit number (except that leading zeros, when they occur in ED numbers, do not appear on the maps). An ED number may be followed by a 1-letter alphabetic suffix. The suffix is used to identify subdivisions of ED's made during data collection and processing activities where the original ED proved to be too populous for an efficient work unit, or to accommodate a revision to a place or other boundary made after January 1, 1978 in mail-out/mail-back areas or January 1, 1979 in conventional census areas. An ED number may also have a 1-letter prefix indicating that the ED is of a special type (e.g., an American Indian reservation), but the prefix is not necessary for unique identification of the ED. ED numbers do not repeat within a county. Any ED may be uniquely identified by accompanying its ED code with the 2-digit State code and 3-digit county code.

ED data, together with data for BG's, appear on STF's 1A and 3A and corresponding microfiche. In addition, ED data appear on STF 1B to complement the summaries for blocks. There are no printed data for ED's.

Historical comparability: Many areas which were covered by ED's in 1970 are summarized in terms of blocks and BG's for 1980. In some cases it may be possible to add up blocks to approximately the 1970 ED's, based on detailed comparison of 1980 and 1970 maps.

In areas covered by ED's for 1980, enumeration considerations largely determined ED size and design, and historical comparability does not normally enter into consideration.

14. FAMILY. Two or more persons, including the householder, who are related by birth, marriage, or adoption, and who live together as one household; all such persons are considered as members of one family. (Persons not in families and not inmates of institutions are classified as unrelated individuals.) Families are defined using responses to the complete-count relationship question.

If the son/daughter of the person or couple who maintains the household and the son's or daughter's spouse and/or children are members of the household, they are treated as part of the householder's family. A roomer/boarder and his/her spouse who are not related to the person or persons who maintain the household, or a resident employee and his/her spouse living in are not counted as a family, but as individuals unrelated to the householder. Thus, a household can contain only one family for purposes of census tabulations.

A person maintaining a household alone, or two or more unrelated persons are regarded as a household but not as a family. Thus, some households do not contain a family.

Subfamily. A married couple with or without own children, or one parent with one or more own children (parent-child group), living in a housing unit and related to the householder, but excluding the householder (for example, a young married couple sharing the home of the husband's or wife's parents).

Since subfamily members are counted as part of the householder's family, the number of subfamilies is not included in the count of families per se. Subfamilies are defined during processing of sample data. In selected tabulations, subfamilies are further classified by type: married-couple subfamilies, with or without own children; father-child subfamilies; and mother-child subfamilies.

14. FAMILY. (Continued)

In certain Census Bureau surveys (e.g., Current Population Survey) before 1980, families as defined here are referred to as "primary families." The term "secondary family" refers to a resident family unrelated to the householder, such as a roomer and his or her spouse. Tabulations of families from such surveys include secondary families.

Historical comparability: A similar definition for family was used in 1970. In 1960, secondary families were also identified.

15. FAMILY INCOME IN 1979. Total money income received in calendar year 1979 by all family members 15 years old and over, tabulated for all families. Family income differs from household income by excluding income received by household members not related to the householder, persons living alone, and others in nonfamily households. (Income of these unrelated persons along with income of persons living in non-institutional group quarters is tabulated as income of unrelated individuals 15 years old and over.) See the definitions of Income in 1979 and Income Type for a discussion of the sources of income recorded, means, medians, limitations, and comparability.

In income tables for families, the lowest income group (e.g., less than $2,500) includes families that were classified as having no 1979 income as defined in the census. Many of these were living on income "in kind," savings, or gifts; were newly created families; or were families in which the sole breadwinner had recently died or left the household. However, many of the families who reported no income probably had some money income which was not recorded in the census. Family income is recorded on public-use microdata in $10 intervals up to $75,000 or down to a net loss of $9,990 or more.

Median and mean family income figures are based on all families, unlike mean or median income figures for persons 15 years old and over, which exclude persons with no income. This item was derived on a sample basis.

Historical comparability: Family income distributions have been tabulated in each census since 1950. Family income has been replaced by household income distributions in certain tabulations for 1980.

16. FAMILY TYPE. Families are classified by type according to sex of the householder and the presence of relatives, based on questions on sex and relationship asked on a complete-count basis.

a. Married-couple family. A family in which the householder and his/her spouse are enumerated as members of the same household.

b. Other family:

Male householder, no wife present. A family with a male householder and no spouse of householder present.

Female householder, no husband present. Family with a female householder and no spouse of householder present.

Historical comparability: The terminology for the family-type categories is new for 1980. The categories are reasonably compatible with the 1970 categories, "husband-wife families," "families with other male head," and "families with female head."

17. FREQUENCY DISTRIBUTION. A systematic arrangement of statistical data where the elements in a universe are divided among the various values or categories of one or more stratifiers, such that the cells present the number of elements or their relative frequency in each of the categories. (Does not include aggregates, means, medians, ratios, etc.)

18. [illegible] The types of combustible matter most often used for house heating, water heating, and cooking in [illegible]pied housing units, tabulated separately. The term "house heating" applies to all types of struc[illegible], including apartment buildings. These items were asked on a sample basis.

a. Utility gas. Gas piped underground from a central system (public utility company, municipal government, or the like) that serves the neighborhood.

b. Bottled, tank, or LP gas. Bottled, tank, or liquified petroleum gas stored in tanks which are refilled or exchanged when empty.

c. Electricity.

d. Fuel oil, kerosene, etc. Fuel oil, distillate, residual oil, kerosene, gasoline, alcohol, and other combustible liquids and semi-fluids.

e. Coal or coke.

f. Wood. Purchased wood, wood cut by household members on their property or elsewhere, driftwood, sawmill or construction scraps, or the like.

g. Other fuel. All other fuels not specified elsewhere, including purchased steam, fuel briquettes, coal dust, waste materials such as corncobs, etc. Households that use solar energy as the prime source of fuel are also included in this category. In certain tabulations of limited detail, coal or coke, wood and sometimes fuel oil and kerosene are combined and shown as either "other fuel" or "other."

h. No fuel used. Includes the three definitions below.

In house heating fuel data - the number of housing units that are not heated;

In water heating fuel data - the number of housing units without piped hot water; and

In cooking fuel data - the number of housing units with no cooking equipment in the unit.

18. FUEL. (Continued)

i. Exclusive Fuel Used. Use of only one type of fuel for house heating, water heating and cooking, ascertained for occupied housing units. The types of exclusive fuel used shown separately are utility gas and electricity. The residual category "other" includes all occupied housing units where utility gas or electricity were not the fuel used exclusively for the three purposes - house heating, water heating, and cooking.

Limitations: A test survey taken before the census showed moderate to large biases in the question on fuels used. A 1970 census evaluation study found that electricity was overreported as a house heating fuel and that fuel oil and kerosene were underreported in the 1970 census.

Historical comparability: Similar data have been collected on cooking and house heating since 1940 and on water heating since 1960.

19. GEOGRAPHIC HIERARCHY. The system of relationships among geographic units where geographic units are subdivided into lower-order units, which in turn may be further subdivided. For example, States are subdivided into counties, which are further subdivided into minor civil divisions. Some reports and summary tape files present data in "hierarchial sequence" as illustrated here:

State
County
MCD
Place* or remainder of MCD
Tract*
Block Group*/Enumeration District

In this case, the records (for example, county records) at each level in the hierarchy are not presented together; instead, component lower order units follow the summary for the corresponding higher level unit. After records for all lower order units are presented, then the record for the next higher level unit appears.

The asterisks in the illustration denote types of geographic entities which may sometimes cross the boundaries of higher level units, for example, a place which exists partly in one MCD and partly in another. In a hierarchical presentation lower level units must fit into the specified framework; for example, a place crossing the boundary between two MCD's would be summarized as two place parts and sequenced separately following the appropriate MCD records.

20. GINI RATIO. Ratio that measures the proportion of the total area under the diagonal that lies in the area between the diagonal and the Lorenz curve. It is used to show the concentration of demographic aggregates.

21. GROUP QUARTERS, PERSONS IN. Persons in living arrangements, such as nursing homes or rooming houses, which are not households. Group quarters status was determined on a complete-count basis.

Two general categories of persons in group quarters are recognized.

a. Inmate of Institution. A person under care or custody at the time of enumeration. Inmates are persons in such facilities as homes, schools, hospitals, or wards for the physically or mentally handicapped; persons in hospitals or wards for mental, tubercular, or chronic diseases; persons in homes for unmarried mothers; persons in nursing, convalescent, and rest homes for the aged and dependent; persons in orphanages; and persons in correctional institutions.

These persons are enumerated as residents of an institution - regardless of their length of stay in the particular place and regardless of the number of people in the places. Some tabulations include data by major types of institutions (home for the aged, mental hospital, correctional institution and other institutions).

b. Other persons in group quarters. Persons living in group quarters who are not inmates of institutions. Rooming and boarding houses, communes, farm and nonfarm workers dormitories, convents or monasteries, and other living quarters are classified as "other" group quarters if there are 9 or more persons unrelated to the person listed in column 1 of the census questionnaire; or if 10 or more unrelated persons share the unit.

Persons residing in certain other types of living arrangements are classified as living in "other" group quarters regardless of the number or relationship of people in the unit. These include persons residing in military barracks, on ships, in college dormitories, or in sorority and fraternity houses; patients in general or maternity wards of hospitals who have no usual residence elsewhere; staff members in institutional quarters; and persons enumerated in missions, flophouses, Salvation Army shelters, railroad stations, etc.

Historical comparability: In 1970, 6 or more unrelated persons living together were classified as group quarters; for 1980 that requirement was raised to 10 or more unrelated persons.

22. GROUP QUARTERS TYPE. Classification of institutions and noninstitutional quarters by the type of service provided, recorded on a sample basis for persons in group quarters. Note that statistics are provided primarily in terms of the number of persons residing in group quarters, not the number of group-quarters (reported only in a subject report). See the definition for group quarters under Group Quarters, Persons In.

For those institutions which have multiple types of major service, usually general hospitals and Veterans Administration hospitals, inmates were classified by the type of care provided on their ward.

a. Inmate of Institution:

Inmate of mental hospital. Patients receiving care in mental hospitals, or psychiatric wards, or receiving mental health services in general hospitals or veteran's hospitals, or receiving care in alcoholic treatment and drug addiction centers. Basic records further discriminate among Federal, State, or local government and private mental hospitals.

22. GROUP QUARTERS TYPE. (Continued)

Inmate of home for the aged. Persons under care in nursing, convalescent, and rest homes for the aged and dependent (including county homes, almshouses, poor farms, and fraternal or religious homes for the aged). While the great majority of these inmates are older persons, persons who are economically dependent or who require nursing care because of chronic physical conditions may be found in these homes, regardless of age. Basic records differentiate homes known to have nursing care from homes not known to have nursing care, and further classify these homes into Federal and State, county and city, private nonprofit, and private proprietary.

Inmate of correctional institution. Inmates of prisons, reformatories, local jails, and work houses. Basic records differentiate Federal, State, and local institutions. Correctional institutions are included with "Other institutions" in many tabulations.

Inmate of other institution. Inmates of hospitals or wards for tuberculosis or other chronic disease (except mental); homes, schools, hospital, or wards for the mentally or physically handicapped, including places for the blind and deaf; orphanages and other homes for dependent and neglected children; residential treatment centers for emotionally disturbed children; training schools for juvenile delinquents; and homes for unwed mothers. Basic records classify each type separately and in many cases differentiate public from private institutions.

b. Other person in group quarters:

In military barracks. Military personnel living in barracks or on ships. Residents of housing units on military bases are not counted here, but are included with the population in households.

In college dormitories. College students in dormitories, fraternity and sorority houses, and rooming houses exclusively for college students (provided there are 10 or more unrelated students or 9 or more unrelated to the resident who operates the place).

In rooming houses. Residents of rooming houses or other living quarters with 10 or more unrelated persons or 9 or more persons not related to the person in charge, and the small number of persons temporarily residing in hotels, motels, Y's, and residential clubs who had no permanent residence elsewhere.

In other group quarters. Persons in religious group quarters (e.g., convents, monasteries, and rectories); workers' dormitories; halfway houses; communes; low-cost transient quarters, including flophouses and missions; general hospital or nurses' dormitories. Also included are crews of commercial ships, institutional staff residing in group quarters, and persons enumerated in the casual count (nonhousehold living situations such as parks, campsites, transient sites, etc.). Basic records code each type separately. Public-use microdata samples identify the eight broad categories shown above, while internal basic records show over 70 detailed types.

Historical comparability: In 1960 data on persons in military barracks were shown only for men. In 1970 and 1980 they include both men and women.

23. HOUSEHOLD. The person or persons occupying a housing unit. Counts of households, householders, and occupied-housing units are always identical in complete-count tabulations. In sample tables, the numbers may not always be the same because of differences in weighting sample data.

24. HOUSEHOLD INCOME IN 1979. Total money income received in calendar year 1979 by all household members 15 years old and over, tabulated for all households. Household income differs from family income by including income received by (a) all household members 15 years old or over, not just those related to the householder, and by (b) persons living alone and in other nonfamily households. See the definitions of income in 1979 and Income Type for discussions of sources of income recorded, means, medians, limitations, and comparability to other data bases.

In income tables for households, the lowest income group (e.g., less than $2,500) includes households that were classified as having no 1979 income as defined in the census. Many of these were living on income "in kind," savings, or gifts; were newly created households; or were households in which the sole breadwinner had recently died or left the household. However, many of the households who reported no income probably had some money income which was not recorded in the census.

Median and mean household income figures are based on all households, unlike mean or median income figures for persons 15 years old and over, which exclude persons with no income. This item was derived on a sample basis.

Historical comparability: Household income was tabulated for the first time in the 1970 census, but its use was limited to one detailed table in PC (1)-D and the Sixth Count Summary Tape. Household income is used in 1980 population reports in some places where family income was used in 1970 population reports. In 1980 as compared to 1970 housing tabulations, household income replaces "income of family or primary individual," which excluded the income of anyone unrelated to the household head. Household income is, however, derivable on public-use microdata samples from the 1960 and 1970 censuses.

25. HOUSEHOLD TYPE. Households are classified by type according to sex of the householder and the presence of relatives based on questions asked on sex and relationship. This item was determined on a complete-count basis.

a. Family household. A household including a family. A family household may also include nonrelatives living with the family. The following subcategories are frequently provided: married-couple family; family with male householder, no wife present; and family with female householder, no husband present.

b. Nonfamily household. A household consisting of a person living alone or of a householder living with other unrelated individuals.

Historical comparability: In 1970, nonfamily households were termed primary individual households, a primary individual being a person living alone or the head of a household in which no relatives were present.

26. HOUSING UNIT. A house, apartment, mobile home or trailer, group of rooms, or single room occupied as a separate living quarter or, if vacant, intended for occupancy as a separate living quarter. Separate living quarters are those in which the occupants live and eat separately from any other persons in the building and which have direct access from the outside of the building or through a common hall.

The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated persons who share living arrangements (except as described in definition of Group Quarters, Persons In). For vacant units, the criteria of separateness and direct access are applied to the intended occupants whenever possible. If that information cannot be obtained, the criteria are applied to the previous occupants.

Both occupied and vacant housing units are included in the housing unit inventory, except that recreational vehicles, boats, caves, tents, railroad cars, and the like are included only if they are occupied as someone's usual place of residence. Vacant mobile homes are included provided they are intended for occupancy on the site where they stand. Vacant mobile homes on dealers' sales lots, at the factory, or in storage yards are excluded from the housing inventory. Housing unit status was determined on a complete-count basis.

Historical comparability: The first Census of Housing in 1940 established the "dwelling unit" concept. Although the term became "housing unit" and the definition has been modified slightly in each succeeding census, the 1980 definition is essentially comparable to previous censuses. In 1970, the definition of a housing unit stipulated the occupants to live and eat separately and to have either direct access or complete kitchen facilities. For 1980 direct access is required; the alternative of complete kitchen facilities has been dropped. In 1970 vacant mobile homes were not counted. In 1980 vacant mobile homes are included in the housing inventory if they are intended for occupancy where they stand. Also in 1970 units with 6 or more unrelated persons living together were classified as group quarters; for 1980 that requirement was raised to 10 or more unrelated persons.

27. INCOME IN 1979. Total money income received in calendar year 1979, ascertained on a sample basis for all persons 15 years old and over. Total income is the sum of amounts reported separately for income from wages and salaries; nonfarm self-employment; farm self-employment; interest, dividends and net rentals; Social Security; public assistance; and all other sources.

The figures represent the amount of income received before deductions for personal income taxes, Social Security, bond purchases, union dues, Medicare deductions, etc.

Receipts from the following sources were not included as income: money received from the sale of property (unless the recipient was engaged in the business of selling such property, in which case, the net proceeds would be counted as income from self-employment); the value of income "in kind" such as free living quarters or food produced and consumed in the home; withdrawal of bank deposits; money borrowed; tax refunds; exchange of money between relatives living in the same household; and gifts and lump-sum inheritances, insurance payments, and other types of lump-sum receipts. The seven specific types of income recorded are further defined under Income Type.

Income in 1979 is reported in several different combinations. Household Income in 1979 and Family Income in 1979 are defined separately in this glossary. When entitled "Income in 1979," the data refer to the money income of persons 15 years old and over. (Where family members received income jointly, appropriate amounts were to be apportioned among specific household members.) Income in 1979 is also tabulated for "unrelated individuals 15 years old and over," i.e., persons not accounted for in family income tabulations. Where a measure of income is to be interrelated with occupation or other work force characteristics, income other than earnings is generally excluded.

Income is tabulated in intervals, for example, less than $5,000; $5,000 to $7,499; $7,500 to $9,999... $35,000 to $49,999; $50,000 or more. The highest income interval to be published in reports is $50,000 or more; on summary tape files the top interval is $75,000 or more. On census basic records incomes from each source are recorded in $10 intervals up to $100,000 and in $1,000 intervals from $100,000 to $999,000. Income amounts of $1,000,000 or more are recorded as $999,500. Net losses up to $10,000 are also recorded. High incomes are grouped together on public-use microdata, with "$75,000 or more" as a single category, to avoid identification of individuals.

a. Median Income. Median income figures for the same population as presented in different reports are based on the set of categories available on the printed tables.

b. Mean Income. The mean income is the amount obtained by dividing the total income of a particular statistical universe (termed "aggregate income" in STF documentation) by the number of units in that universe. Thus, mean family income is obtained by dividing total family income by the total number of families. Mean income for persons is obtained by dividing the total income of persons (including patients or inmates in institutional quarters) by the number of persons with income. When the mean income for an area or population subgroup is a net loss, the amount is shown preceded by a minus sign (e.g., -$123).

Care should be exercised in using and interpreting mean income values in the statistics for small subgroups of the population. Since the mean is strongly influenced by extreme values in the distribution, it is especially susceptible to the effects of sampling variability, misreporting, and processing errors. The median is not affected by extreme values and is, therefore, a better measure than the mean when the population base is small. The mean, nevertheless, is shown for most small-area tabulations because, when weighted according to the number of cases, the means can be added to obtain summary measures for areas and groups other than those shown.

c. Per capita income. Per capita income is the mean income computed for every man, woman, and child in a particular group. It is derived by dividing the total income of a particular group by the total population (including patients or inmates in institutional quarters) in that group.

Limitations: Since questionnaire entries for income are frequently based on memory and not on records, many persons tend to forget minor or irregular sources of income, and, therefore, underreport their income. In addition, there are errors of reporting due to misunderstanding of the income questions. One such error is the reporting of gross instead of net dollar amounts for the two questions on net self-employment income, which results in an overstatement of these items. Such instances of overreporting would have an impact on the level of mean nonfarm or farm self-employment income and mean total income.

27. INCOME IN 1979. (Continued)

Many reporting errors are rectified through the coding and the computer editing procedures, with the result that consistency of reported income items with work experience, occupation, and class-of-worker information is improved. For example, if a person reported that he or she was self-employed on his or her own farm, not incorporated, but had reported wage and salary earnings only, the latter amount is shifted to net farm self-employment income. Another type of problem involves nonreporting of income. Where income information was not reported, editing and allocation procedures imputed appropriate values (either "none" or positive or negative dollar amounts) for the missing entries.

The income data obtained in the 1980 census cover money income only. The fact that many farm families receive an important part of their income in the form of "free" goods produced and consumed on the farm rather than in money should be taken into consideration in comparing the income of farm and nonfarm residents. Nonmoney income is also received by some nonfarm residents. Such income often takes the form of business expense accounts, use of business transportation and facilities, or partial compensation by business for medical and educational expenses. Many low-income families also receive income "in kind" from public welfare programs (e.g., food stamps).

Comparability with income tax data: For several reasons, the income data from the census are not directly comparable with those which may be obtained from statistical summaries of income tax returns. Income, as defined for tax purposes, differs somewhat from the Bureau of the Census concept. Moreover, the coverage of income tax statistics is different because of the exemptions of persons having small amounts of income and the inclusion of net capital gains in tax returns. Furthermore, members of some families file separate returns and other file joint returns; consequently, the income reporting unit is not consistently either a family or a person.

Comparability with Social Security Administration earnings record data: The earnings from the census are not directly comparable with earnings records of the Social Security Administration. The earnings data for 1979 exclude the earnings of most civilian government employees, some employees of nonprofit organizations, workers covered by the Railroad Retirement Act, and persons not covered by the program because of insufficient earnings. Furthermore, earnings received from any one employer in excess of $22,900 in 1979 are not covered by earnings records. Finally, since census data are obtained from household questionnaires, they differ from Social Security Administration earnings record data, which are based upon employers' reports and the Federal income tax returns of self-employed persons.

Comparability with Bureau of Economic Analysis income series. The Bureau of Economic Analysis (BEA) of the Department of Commerce publishes annual data on aggregate and per capita personal income received by the population for each State and selected standard metropolitan statistical areas. Aggregate income estimates based on the income statistics shown in the 1980 census would be different from (and generally less than) those shown in the BEA income series for several reasons.

The Bureau of the Census data are obtained directly from households, whereas the BEA income series is estimated largely on the basis of data from administrative records of business and governmental sources. Moreover, the definitions of income are different. The BEA census income series includes some items not included in the census income data, such as income "in kind," income received by nonprofit institutions, the value of services of banks and other financial intermediaries rendered to persons without the assessment of specific charges, Medicare payments, and the income of persons who died or emigrated prior to April 1, 1980. On the other hand, the census income data include contributions for support received from persons not residing in the same household and employee contributions for Social Security.

Historical comparability: Data on income last year have been collected in each census since 1940. Income questions were asked in essentially the same way in 1970 as in 1980, except that the separation of interest, dividends and net rental income from other sources is new for 1980 (possibly leading to more complete reporting of income from these sources).

Another new feature was the instruction that the respondent should add up the income figures from the various sources and report total income on a separate line on the form. This feature was to help respondents avoid counting the same income in more than one category and encourage recall of income from other sources. The 1980 census obtained income for persons 15 years old and over; the 1970 universe also included 14-year-olds.

Income intervals reported in 1980 publications concentrate on higher dollar amounts than did their 1970 counterparts, reflecting inflation. In comparing income data for 1979 with earlier years, it should be noted that an increase or decrease in money income does not necessarily represent a comparable change in real income, unless adjustment for changes in prices is made. The ratio of the average Consumer Price Index in 1979 to the corresponding figure in 1969 is 1.98, and this is the factor used in converting 1969 median and mean income figures in current dollars to constant 1979 dollars for comparison with 1979 median and mean income figures.

28. INCOME TYPE IN 1979. Classification of income in 1979 by the source from which it was received, ascertained on a sample basis for all persons 15 years old and over with income. See the definition of Income in 1979 for types of receipts which are not counted as income (e.g., tax refunds).

a. Earnings. The sum of wage or salary income and net self-employment income from nonfarm and farm sources. Earnings are those sources of income most appropriately interrelated with labor force characteristics such as hours and weeks worked in 1979 or occupation.

Wage or salary income. Total money earnings received for work performed as an employee at any time during the calendar year 1979. It includes wages, salary, pay from Armed Forces, commissions, tips, piece-rate payments, and cash bonuses earned. Sick leave pay is included. Reimbursement for business expenses and payment "in kind" (for example, food, and lodging received as payment for work performed) are excluded.

Nonfarm self-employment income. Net money income (gross receipts minus business expenses) received from an unincorporated nonfarm business, professional enterprise, or partnership in which the person was engaged on his or her own account. Gross receipts include the value of all goods sold and services rendered. Business expenses include cost of goods purchased, rent, heat, light, power, depreciation charges, wages and salaries paid, business taxes (not personal income taxes), etc.

The so-called "salary" that some owners of unincorporated businesses pay themselves is included here. On the other hand, income received for working for an incorporated business, even though the person may own the business, is counted under wage or salary income.

28. INCOME TYPE IN 1979. (Continued)

Farm self-employment income. Net money income (gross receipts minus operating expenses) received from the operation of an unincorporated farm by a person on his own account, as an owner, renter, or sharecropper. Gross receipts include the value of all products sold, governmental subsidies, money received from the rental of farm equipment to others, and incidental receipts from the sale of wood, sand, gravel, etc. Operating expenses include the cost of fuel, fertilizer, seed, and other farming supplies, cash wages paid to farmhands, depreciation charges, cash rent, interest on farm mortgages, farm building repairs, farm taxes (not Federal, State, and local income taxes), etc. The value of fuel, food, and other farm products used for family living is not included as part of net income.

b. Income other than earnings. Interest, dividends, royalties, or net rental income. Money received or credited to a person's account as interest from sources such as notes, bonds, deposits in banks and savings and loan associations, credit unions, and posted savings certificates; payments made by corporations and mutual funds to stockholders (excluding profits or losses from the sale of stocks); net royalties such as income from oil, gas, and other mineral rights; from patents, copyrights on literary works, trademarks, formulas; and net rental of property or real estate or from roomers or boarders.

Social Security income. Cash receipts of Social Security pensions, survivors' benefits, permanent disability insurance payments, and special benefit payments made by the Social Security Administration (under the national old-age, survivors, disability, and health insurance programs) before deductions of health insurance premiums. "Medicare" reimbursements are not included nor are payments under the Supplemental Security Income program. Cash receipts of retirement, disability, and survivors' benefit payments made by the U.S. Government under the Railroad Retirement Act are also included.

Public assistance income. Cash receipts of payments made under the following public assistance programs; aid to families with dependent children, old-age assistance, general assistance, aid to the blind, and aid to the permanently and totally disabled. These payments are generally labeled "Supplementary Security Income" and, while usually received from the Federal government, may also be received from State or local governments. Separate payments received for hospital or other medical care are excluded from this item.

Income from all other sources. Money income received from sources such as veteran's payments; public or private pensions; periodic receipts from insurance policies or annuities; unemployment insurance benefits; workmen's compensation cash benefits; periodic payments from estates and trust funds; alimony or child support from persons who are not members of the household; receipts for foster child care; net gambling gains; nonservice scholarships and fellowships; and money received for transportation and/or subsistence by persons participating in special governmental training programs, e.g., under the Comprehensive Employment and Training Act or Work Incentive Program; and periodic contributions from persons outside the household, e.g., voluntary allotment checks sent by Armed Forces personnel to relatives not living with them.

In most reports, data on income type are limited to (1) the number of households or families with income of a specified type and (2) the mean income of the specified type for the applicable households or families (i.e., aggregate income of the specified type received by persons in households or families divided by the number of households or families with that type of income).

In income type tabulations, a household or family may be counted more than once, i.e., for each type of income received, although the dollar amounts of income are counted only once.

Limitations: See the discussion under Income in 1979.

Historical comparability: See the discussion under Income in 1979.

29. INDUSTRY. The kind of business or industrial activity in which the person was employed during the reference week or, if not employed, in which the person was most recently employed since 1975. Persons working at more than one job were instructed to describe the one at which they worked the most hours during the reference week. If the employer was engaged in more than one activity, the respondent was instructed to describe only the main activity at the place or facility where the person worked. Industry is most frequently tabulated for employed persons 16 years old and over, less often for the experienced civilian labor force, which includes both employed and experienced unemployed persons 16 years old and over. Industry data are also collected but are not tabulated for persons not currently in the labor force who have worked since 1975. Industry data are collected on a sample basis.

Responses were coded to one of 231 industry categories by specially trained industry and occupation coders in census processing offices.

Census industry categories are fully defined in the Classified Index of Industries and Occupations, PHC 80-R3. Persons wishing to use the census system in coding other data bases may use the Alphabetical Index of Industries and Occupations, PHC 80-R4. Major industry categories and important subdivisions are as follows:

Agriculture, forestry and fisheries
Mining
Construction
Manufacturing
Transportation, communications, and other public utilities
Wholesale trade
Retail trade
Finance, insurance, and real estate
Business and repair services
Personal services
Entertainment and recreation services
Professional and related services
Health services
Educational services
Other professional and related services
Public administration

29. INDUSTRY. (Continued)

Relation to Standard Industrial Classification. The Standard Industrial Classification (SIC) system was developed under the sponsorship of the Office of Management and Budget, and subsequently under the Office of Federal Statistical Policy and Standards, and is designed for the classification of establishments by the type of industrial activity in which they are engaged.

One of the major purposes of the SIC is to promote uniformity and comparability in the presentation of statistical data collected by various agencies. Accordingly, in the census of population, the industry categories are defined in these terms. However, population census data, which are collected from households, differ in nature and detail from those obtained from business establishments. Therefore, the 1980 census classification system does not reflect the full SIC detail in all categories. However, the census of population is one of the few sources of industrial data that includes all industries.

In addition to such classification differences, census data may differ from other industrial data for the following reasons: the dates to which the data refer may not be the same; workers who live in one geographic area and work in another would be reported at their place of residence by the census but at their place of work in other surveys; and dual jobholders may be counted in the reports of two establishments but counted in the census for only their major job. Many other sources for industrial data cover private employees but exclude self-employed and government workers.

Relation to certain occupation groups. Although some occupation groups are closely related to certain industries, the industry categories are broad and include occupations other than those concentrated in that industry. For example, persons employed in agriculture include truck drivers and bookkeepers in addition to farm workers; persons employed in the transportation industry include mechanics and secretaries in addition to transport operatives; and persons employed in the private household industry include occupations such as chauffeur, gardener, and secretary.

Historical comparability: There was no change in wording of the industry question from 1970. A version of this question was asked in 1820 and 1840, and consistently since 1910.

The 1970 industry categories were based on the 1967 Standard Industrial Classification (SIC) system. The 1980 classification reflects some significant changes made in the 1972 SIC manual and some minor technical adjustments made in 1977.

One important change was in the census classification of public administration which was subdivided by level of government in the 1970 census, but for 1980 is classified by its primary economic activity. For example, as a result of an SIC change, the 1980 detailed tabulations include such categories as executive and legislative offices; justice, public order, and safety; and public finance, taxation and monetary policy. In 1980 most employees of governmental social service agencies are classified under social services rather than under public administration (although they are still classified as employees of a government under Class of Worker).

More information on changes in industrial classification will be shown in later 1980 census reports. In the study of earlier data it may also be useful to refer to the Census Bureau's Technical Paper No. 26: "1970 Occupation and Industry Classification Systems in Terms of Their 1960 Occupation and Industry Elements."

More detailed changes in industrial classification are highlighted in charts in the Standard Industrial Classification Manual, 1972. Reference materials on the relationship of 1970 and 1980 industry classifications are being prepared.

30. INTERPOLATION. The process of calculating approximate values of a function between two known values. Interpolation is frequently used in calculating medians or percentiles based on interval data and in approximating standard errors from tables. In linear interpolation the function of N (FN) may be calculated where N is the estimate, U and L are the upper and lower known values. In median calculation, N would be one-half the number of cases, L would be the cumulative number of units in all categories below the median category, U - L would be the number of cases in the median category, and FU and FL would be the values (for example, ages) associated with the upper and lower limits of the interval.

31. LABOR FORCE STATUS. Persons 16 years old and over were classified as to their status in the labor force based on replies to several questions relating to work activity and status during the reference week. These items were asked on a sample basis.

Data on labor force status refer to the calendar week prior to the date on which respondents completed their questionnaires or were interviewed by enumerators. Since the week of enumeration was not the same for all persons, the reference week for labor force data is not entirely uniform. For many persons, however, the reference week for answering the 1980 census employment questions was the last week in March, 1980.

a. Labor force. Members of the Armed Forces and the civilian labor force as defined below.

(1) Armed Forces. Persons 16 years old and over on active duty in the Army, Air Force, Navy, Marine Corps and Coast Guard, as indicated in responses to the question on industry and shown in the Industry definition. Members of the merchant marine and civilian employees of the Department of Defense are not members of the Armed Forces. Service in a National Guard or reserve unit for short periods of active duty for training does not count as active duty in the Armed Forces.

(2) Civilian labor force. Employed and unemployed civilians.

Employed. Civilians 16 years old and over who were either (a) "at work" - those who did any work at all as paid employees or in their own business or profession, or on their own farm, or who worked 15 hours or more as unpaid workers on a family farm or in a family business; or (b) "with a job but not at work" - those who did not work during the reference week but had jobs or businesses from which they were temporarily absent due to illness, bad weather, industrial dispute, vacation, or other personal reasons. Excluded from the employed are persons whose only activity consisted of work around the house or volunteer work for religious, charitable, and similar organizations. Employed persons are sometimes further classified as full time or part time based on whether they worked 35 or more hours during the reference week.

Unemployed. Civilians 16 years old and over who were neither "at work" nor "with a job, but not at work" and who were: (a) looking for work during the last 4 weeks, and (b) available to accept a job.

31. LABOR FORCE STATUS. (Continued)

Examples of jobseeking activities are: (1) registering at a public or private employment office, (2) meeting with prospective employers, (3) checking with friends or relatives, (4) placing or answering advertisements, (5) writing letters of application, and (6) being on a union or professional register. Also included as unemployed are persons who did not work at all during the reference week and were waiting to be called back to a job from which they had been laid off.

b. Not in Labor Force. Persons 16 years old and over who are not classified as members of the labor force. This category consists mainly of students, housewives, retired workers, seasonal workers enumerated in an "off" season who were not looking for work, inmates of institutions, disabled persons, and persons doing only incidental unpaid family work (fewer than 15 hours during the reference week).

Also included are so called "discouraged workers" who do not have a job and have not been actively looking for work during the last four weeks. Inmates of institutions are occasionally presented as a subcategory within "not in labor force." Tasks performed by inmates of institutions are not considered "work" for the purposes of the census.

In addition to the above classification, the concept of Experienced Civilian Labor Force appears in certain detailed tabulations.

Experienced Civilian Labor Force. Employed persons and those unemployed persons who have worked at any time in the past, i.e. "experienced unemployed. This concept serves as the universe for certain tabulations of occupation and industry where unemployed persons are to be included. (Occupation and industry data were not collected for persons who have never worked, or who have not worked since 1974.)

Comparability with data from other sources. Because employment data from the census are obtained from respondents in households, they differ from statistics based on reports from individual business establishments, farm enterprises, and certain government programs. Persons employed at more than one job are counted only once in the census and are classified according to the job at which they worked the greatest number of hours during the reference week.

In statistics based on reports from business and farm establishments, persons who work for more than one establishment may be counted more than once. Moreover, other series, unlike those presented here, may exclude private household workers, unpaid family workers, and self-employed persons, but may include workers less than 16 years of age.

Historical comparability: In 1940, 1950, and 1960, labor force data were published for persons 14 years old and over. In 1970, most labor force data were for persons 16 years old and over to comply with the official Government definition of employed and unemployed instituted in 1967, although data on 14- and 15-year olds were furnished in 1970 to provide a comparability bridge with earlier censuses.

32. LORENZ CURVE. First expounded in 1905, it is used to measure inequalities in the distribution of wealth or income. It has also been used to depict the state (as opposed to the process) of concentration of population or other demographic aggregates.

33. MEAN. The arithmetic average of a set of values. It is derived by dividing the sum of a group of numerical items by the total number of items. Mean income, for example, is defined as the value obtained by dividing the total or aggregate income of a population by the number of units in that population. Thus, the mean income for the classification "families" is obtained by dividing the aggregate of all income reported by persons in families by the total number of families.

34. MEDIAN. In general, a value that divides the total frequency into two equal parts. For example, to say that the median family income in the United States in 1977 was $16,009 indicates that half of all families had incomes larger than that value, and half had less.

Most medians presented in Census Bureau publications are computed from a frequency distribution, using interpolation inside the interval that contains the median. For example, the median family income cited above was determined by interpolating between the bottom and top of a $16.000-$16,999 interval. Interpolation is evident when noninteger medians are presented for discrete variables; for example, median family size of 3.2 persons.

35. MINOR CIVIL DIVISION (MCD). A primary political and administrative subdivision of a county, MCD's are most frequently known as townships, but in Maryland they are election or tax assessment districts.

The Census Bureau has assigned each MCD, alphabetically sequenced within county, an incremental, unique 3-digit numeric code. In addition, MCD's in 11 States have a 4-digit "MCD sequence number" which allows MCD's to be sorted into alphabetical sequence within a State.

MCD boundaries are represented on all detailed census maps. In addition, MCD outlines appear on small-scale maps published in PC 80-1-A and -B and HC 80-1-A reports and in conjunction with the PHC 80-2 series. Maryland has 297 MCD's recognized for the 1980 census.

Historical comparability: MCD's which have changed boundaries during 1970 to 1980 are noted in footnotes to table 4 of PC 80-1-A reports for Maryland.

36. MORTGAGE STATUS. The existence of a mortgage, deed of trust, contract to purchase, or similar debt on the property. Land contracts, contracts for deed, and assumption agreements are included.

This item was ascertained for owner-occupied one-family houses on less than 10 acres, without a commercial establishment or medical office on the property. Mobile homes or trailers and condominium units were also excluded. This item was asked on a sample basis.

Selected monthly owner costs are usually reported separately for units with a mortgage and for units not mortgaged (i.e., owned free and clear) since housing costs are quite different for the two groups.

Historical comparability: This item is new for 1980.

37. NATIVITY AND PLACE OF BIRTH. The population is classified into "native" and "foreign born" based on the State, foreign country, Puerto Rico, or outlying area of the United States where the person's mother was living at the time the person was born (not the location of the hospital if in a different State in the United States). This item was asked on a sample basis.

a. Native population. Persons born in the United States, Puerto Rico, U.S. Virgin Islands, Guam, or other outlying area of the United States; or at sea or in a foreign country if they have at least one American parent (determined from the citizenship question). In certain presentations, this population is further classified as born in State of residence; born in different State (this category may be further broken down by region of birth); and born abroad, at sea, etc. of American parents.

b. Foreign-born population. All persons not classified as native.

Historical comparability: The format of the place-of-birth question was changed from 1970 so that the instruction to print the State where the person's mother was living at the time the person was born is highlighted so that respondents would not report the location of the hospital if in a different State from the mother's usual residence.

38. OCCUPANCY STATUS. The classification of all housing units as either occupied or vacant. This item was determined on a complete-count basis.

a. Occupied. The classification of a housing unit with a person or persons living in it as a usual residence when enumerated - or only temporarily absent, for example, on vacation. A household consists of all the persons who occupy a housing unit. If all the persons staying in the unit have their usual place of residence elsewhere, the unit is classified as vacant. Complete-count figures on households and occupied housing units should match - although sample estimates of households and occupied housing units may differ because of weighting.

b. Vacant. A housing unit with no one living in it at the time of enumeration, unless its occupants are only temporarily absent. If, at the time of enumeration, the unit is temporarily occupied solely by persons who have a usual residence elsewhere, it is also classified as vacant.

Historical comparability: Similar data have been collected since 1940.

39. OCCUPATION. The kind of work the person was doing at a job or business during the reference week or, if not at work, at the most recent job or business if employed since 1975. Persons working at more than one job were instructed to describe the one at which the person worked the most hours during the reference week. Occupation is most frequently tabulated for employed persons 16 years old and over, and less often for the experienced civilian labor force, which includes both employed and experienced unemployed 16 year olds and over.

Occupation data were also collected but are not tabulated for persons not currently in the labor force who have worked since 1975. Occupation is not determined for persons in the Armed Forces. These data were collected on a sample basis.

The write-in responses assigned the respondent to one of 503 occupation categories, coded by specially trained industry and occupation coders in census processing offices. Only the code, i.e., none of the written-in information, is retained on census basic records and public-use microdata. Census occupation categories are fully defined in the Classified Index of Industries and Occupations, PHC 80-R3. (Persons wishing to use the census system in coding other data bases may use the Alphabetical Index of Industries and Occupations, PHC 80-R4.)

Relation to Standard Occupational Classification: The 503 occupation categories generally are based on the Standard Occupational Classification (SOC) system, originally issued in 1977 by the Office of Federal Statistical Policy and Standards and revised in 1980. One of the major purposes of the SOC is to promote uniformity and comparability in the presentation of occupational data collected by various agencies. Public-use microdata documentation and other references will define the relationship between the 3-digit census codes and the revised 4-digit SOC codes.

Summary and major occupation categories are as follows:

a. Managerial and professional specialty occupations:

Executive, administrative, and managerial occupations
Professional specialty occupations

b. Technical, sales, and administrative support occupations:

Technicians and related support occupations
Sales occupations
Administrative support occupations, including clerical

c. Service occupations:

Private household occupations
Protective service occupations
Service occupations, except protective and household
Farming, forestry, and fishing occupations
Precision production, craft, and repair occupations

d. Operators, fabricators, and laborers:

Machine operators, assemblers, and inspectors
Transportation and material moving occupations
Handlers, equipment cleaners, helpers, and laborers

39. OCCUPATION. (Continued)

These are the categories included in STF 3 and in Census Tracts reports. More detailed tabulations present subcategories within these basic groups. In the most detailed tabulations, some categories represent subdivisions of an occupation on the basis of industry of class of worker.

Historical comparability: Occupation has been asked in each census since 1850. The 1980 occupation question differs from its 1970 counterpart primarily by omitting a request for the respondent's job title. Because this information sometimes proved misleading, it was dropped for 1980.

The major difference in occupation data for 1970 and 1980 stems from the adaptation of census occupation coding to the new Standard Occupational Classification system, first issued in 1977. While many of the broad categories observed in the 1980 scheme have been designed to offer a general measure of compatibility with many 1970 categories, the principles governing the classification and many of the detailed categories have been altered substantially. Reference materials on the relationships of 1970 and 1980 occupation classifications are being prepared.

40. OWNER COSTS, SELECTED MONTHLY. The sum of payments for real estate taxes, fire and hazard insurance, utilities, fuels, and mortgage. These data are tabulated for "specified owner-occupied" units, i.e., one-family houses on less than 10 acres without a commercial establishment or medical office on the property. The data exclude owner-occupied condominiums, mobile homes, and trailers.

Only selected monthly owner costs are included, since payments for maintenance and repair are excluded. Selected monthly owner costs are presented in tabulations comparable to those for gross rent since they are both measures of shelter costs, albeit for different universes.

The components of selected monthly owner costs are payments for the following items, all asked on a sample basis.

a. Real estate taxes. The total amount of all real estate taxes payable on the entire property (land and buildings) last year. It includes State, local, and all other real estate taxes even if delinquent, unpaid, or paid by someone outside the household. Taxes are reported even if included in the mortgage payment. Not covered are payments on delinquent taxes due from earlier years.

b. Fire and hazard insurance. The annual premium for fire and hazard insurance on the property, that is, policies which protect the property and its contents against loss due to damage by fire, lightning, winds, hail, explosion, etc. Liability policies are included only if they are paid with fire and hazard premiums and the amounts for fire and hazard cannot be separated. Premiums are included even if paid by someone outside the household or remain unpaid.

c. Mortgages. The regular monthly amount (both principal and interest) required by the lender on mortgages (including second or junior mortgages), deed of trust, or similar debt on the property; or payments on a contract to purchase the property.

Amounts are included even if the payments are delinquent or paid by someone else. The amount includes everything paid to the lender or lenders, regardless of what is included. Separate parts of the question determine whether taxes and insurance are included in the payment to the lender so that it is possible to avoid counting these components twice in the computation of monthly owner costs.

d. Utilities and fuel. See the discussion under Energy Costs, Monthly Residential.

In the computation of selected monthly owner costs, annual figures for taxes, insurance, water and fuels (items where annual figures are usually more readily available than monthly figures) are divided by 12 to yield monthly figures.

Selected monthly owner costs are tabulated in a varying number of categories. Data are generally presented separately for units with a mortgage and units not mortgaged (i.e., owned free and clear) since the distribution of housing costs is quite different for the two groups.

Selected Monthly Owner Costs as Percentage of Income. The ratio of selected monthly owner costs to household income in 1979 is converted to percentage form. The data are tabulated for "specified owner-occupied" units, i.e., one-family houses on less than 10 acres without a commercial establishment or medical office on the property. The data exclude owner-occupied condominiums, mobile homes, and trailers.

Data are shown in terms of the number of housing units in categories such as "less than 20 percent," "20 to 24 percent," "25 to 34 percent," and "35 percent or more;" the data are generally cross-classified by household income. Units occupied by households reporting no income or a net loss are included in the "not computed" category. This item was computed on a sample basis.

Limitations: Utility and fuel costs are frequently overestimated by respondents.

Historical comparability: None of the components of selected monthly owner costs have been collected in previous censuses. (Utility and fuel costs were collected in 1970, but only for renters.)

41. PERSONS IN FAMILY. The number of persons in a household who are related to the householder, counting the householder, who thereby constitute a family. The measure "persons per family" is obtained by dividing the number of persons in families by the total number of families (or family householders). In tables where persons in family or persons per family are cross-tabulated by race or Spanish origin, family members are classified by the race of the householder rather than the race of each individual.

42. PERSONS IN HOUSEHOLD. The number of persons living in the housing unit. All occupants are counted - not just those related to the householder, but also any lodgers, roomers, boarders, partners, wards, foster children, and resident employees who share the living quarters.

Figures for "persons in household" match those for "persons in unit" in tabulations based on complete-count data. In sample tabulations, they may differ because of the weighting process. The phrase "persons in household" is used for population tabulations, "persons in unit" for housing items. "One-person household" and "persons living alone" are synonyous.

43. PLACE OF WORK. The geographic location of the plant, office, store, or other establishment where the person worked most last week (see the discussion of reference week under Labor Force Status), ascertained for persons at work last week, including both civilian employed and Armed Forces at work, and tabulated for persons 16 years old and over. These data were obtained on a sample basis.

If the person worked at more than one location for the same employer (such as a grocery store chain or public school system), the exact address of the location or branch where the respondent worked most last week was requested. Persons working at more than one job were asked to report the location of the job at which they worked the greatest number of hours during the census week. Salespersons, delivery persons, and others who worked in several places each week were requested to give the address at which they began work each day, if they reported to a central headquarters. For cases in which daily work was not begun at a central place each day, the person was asked to report the exact address of the place where he or she worked the most hours last week.

Responses were coded in census processing offices but only for a sample of approximately one-half of the long-form questionnaires (a cost-saving measure). All entries were assigned codes which define the work location in terms of State, county, place of 2,500 or more as estimated prior to the census. For residents of SMSA's, place of work was coded further to tract and block (if in a blocked area) if the place of work was within the same SMSA or multi-SMSA commutershed.

Special tabulations can be prepared at user expense which make use of the additional detail available on census basic records. For instance, tabulations can be generated which show commuter flows by origin and destination in terms of census tracts within a given SMSA or multi-SMSA commutershed. Characteristics of workers by place of work can also be tabulated.

Public-use microdata "A" and "B" samples report place of work in the same terms as place of residence, i.e., States and "county groups" with 100,000 or more inhabitants. Within large SMSAs, individual counties and places over 100,000 are frequently identified as county groups making possible some analysis of commuting patterns by commuter characteristics. The "C" sample identifies place of work in central cities and in places in four size categories.

Limitations: It should be noted that place-of-work tabulations do not necessarily give the total number of persons who work in the specified area, only those who also reside within the area summarized. In the above example, the number reported as working in the central business district would not include workers who commute from outside the SMSA being summarized.

Since Place of Work was coded only for a sample of one-half of all long-form questionnaires, along with Residence in 1975 and Travel Time to Work, it required an estimation scheme which differed from that used for full-sample items. As a consequence, the estimated number of workers 16 and over as derived from place-of-work tabulations will differ somewhat from the corresponding figure derived from tabulations of Means of Transportation to Work, a full-sample item. Further, any cross-tabulation of place of work by other items is necessarily based only on the half-sample.

Historical comparability: Place of work was asked first in 1960, when the inquiry was limited to the State, county, and city of work. In 1970, the question took on its current form, requesting the specific street address and ZIP code. A higher percentage of cases were successfully coded to tract and block of work in 1980 than in 1970, due to improvements in coding materials. Data on place of work tabulated for inside and outside the area of residence, as discussed above, are new for 1980.

44. POPULATION. (1) (noun) The number of inhabitants of an area. (2) (adjective) Referring to data about persons, as in "population characteristics." (3) (noun) A group of persons, housing units, or other entities included in a census, or from which samples are taken for statistical measurements.

45. POVERTY STATUS IN 1979. Families and unrelated individuals are classified as above or below the poverty level by comparing their total 1979 income to an income cutoff or "poverty threshold." The income cutoffs vary by family size, number of children, and age of the family householder or unrelated individual. Poverty status is determined for all families (and, by implication, all family members). Poverty status is also determined for persons not in families, except for inmates of institutions, members of the Armed Forces living in barracks, college students living in dormitories, and unrelated individuals under 15 years old. Poverty status is derived on a sample basis.

The 1980 census definition of poverty reflects revisions recommended by a Federal interagency committee in 1979 to a definition adopted in 1969. The index is based on the Department of Agriculture's 1961 Economy Food Plan and reflects the different consumption requirements of families based on their size and composition. It was determined from the Department of Agriculture's 1955 survey of food consumption that families of three or more persons spend approximately one-third of their income on food; the poverty level for these families was, therefore, set at three times the cost of the economy food plan. For smaller families and persons living alone, the cost of the economy food plan was multiplied by factors that were slightly higher in order to compensate for the relatively larger fixed expenses of these smaller households.

The poverty thresholds are updated every year to reflect changes in the Consumer Price Index (CPI). Cutoffs for 1979 income used in poverty statistics in the 1980 census are presented in figure 2. As an example, the poverty threshold for a family of four with two related children under 18 can be found in the chart to be $7,356 in 1979. Poverty thresholds are computed on a national basis only. No attempt has been made to adjust these thresholds for regional, State, or other local variations in the cost of living.

The poverty status of a person who is a family member is determined by the family income and its relationship to the appropriate poverty threshold for that family. The poverty status of an unrelated individual is determined by his or her own income in relation to the appropriate poverty threshold. Thus, two unrelated individuals living together may not have the same poverty status.

Households below the poverty level are defined as households in which the total income of the family or the householder of a nonfamily household is below the poverty level. The incomes of persons in the household other than members of the family or other than the householder in a nonfamily household are not taken into account when determining poverty status of a household.

Because the poverty levels currently in use by the Federal Government do not meet all the needs of the analysts of the data, variations of the poverty definition are available in terms of various multiples of the official poverty levels. The one most frequently tabulated is 125 percent of the poverty level, where a family or person may have up to 25 percent more income than normally allowed under the poverty threshold appropriate for the family size, etc.

45. POVERTY STATUS IN 1979. (Continued)

a. Below poverty level ("poor"). Families or persons whose total family income or unrelated individual income in 1979 was less than the poverty threshold specified for the applicable family size, age of householder, and number of related children under 18 present. In certain tabulations, this group is further subdivided into those with income "below 75 percent of poverty level" and "between 75 and 99 percent of poverty level."

b. Above poverty level ("nonpoor"). Families or persons whose total family income or unrelated individual income in 1979 was equal to or greater than the poverty threshold specified for the applicable family size, etc. In certain tabulations, this group is further subdivided into those with income "between 100 and 124 percent of poverty level," "between 125 and 149 percent of poverty level," "between 150 and 174 percent of poverty level," "between 175 and 199 percent of poverty level," and "200 percent of poverty level and above."

Limitations: The term "poverty" connotes a complex set of economic, social, and psychological conditions. The standard statistical definition provides only estimates of economic poverty based on the receipt of money income before taxes. Excluded from the income concept is a measure of the benefits derived from the receipt of in-kind government transfers, such as food stamps, Medicaid, and public housing; private transfers such as health insurance premiums paid by employers; the value of the services obtained from the ownership of assets, such as owner-occupied housing units; and the receipt of money from the sale of property, withdrawal of bank deposits, gifts and money borrowed.

A comprehensive review of the current poverty definition and its limitations can be found in The Measure of Poverty, U.S. Department of Health, Education, and Welfare, April 1976. See also the discussion of limitations under Income in 1979.

Historical comparability: Poverty statistics were first included in a decennial census in 1970. Prior to 1980 the poverty thresholds did not distinguish among families with 7, 8, and 9 or more persons; on the other hand, the cutoffs were further differentiated by the sex of the family head or unrelated individual and by farm/nonfarm residence.

In the 1970 census, the thresholds for farm residents were set at 85 percent of the thresholds for nonfarm residents. 1979 income thresholds used in the 1980 census represent a weighted average of the nonfarm thresholds used in the past male headed and female headed families. The elimination of the 85-percent threshold for farm families increased the farm population classified as poor by about 174,000 persons or about one-fifth nationwide. The net effect of all three changes on the total number of poor persons is to increase it approximately 380,000 or 1.5 percent.

Since the poverty income cutoffs have been adjusted each year for changes in the CPI, and since the overall impact of the definitional changes is minimal, 1980 census poverty figures for the total and nonfarm population should be reasonably comparable to the 1970 poverty figures. However, because of the definitional changes cited, comparisons involving the farm population should be made with caution.

46. PUBLIC-USE MICRODATA SAMPLE. A computerized file consisting of records of the questionnaire or interview responses in a census or survey for individuals and housing units (with no names, addresses, or other information that would permit identification), rather than summary or tabulated statistics for geographic areas. Users can manipulate the microdata files to prepare tabulations of their own design. In the case of population and housing, only small samples of the census basic records are prepared; tabulations of public-use microdata samples are generally less reliable than published tabulations because of the smaller sample size.

47. RACE. All persons were asked to identify themselves according to the following race categories on the 1980 questionnaire: White, Black or Negro, American Indian, Eskimo, Aleut, Japanese, Chinese, Filipino, Korean, Asian Indian, Vietnamese, Hawaiian, Guamanian, Samoan, and Other. The "Other" category includes Malayan, Polynesian, Thai, and other groups not included in the specific categories listed on the questionnaire. This item was asked on a complete-count basis.

The concept of race as used by the Census Bureau reflects self-identification by respondents; it does not denote any clear-cut scientific definition of biological stock. Since the 1980 census obtained information on race through self-identification the data represent self-classification by people according to the race with which they identify themselves. For persons with parents of different races who could not provide a single response to the race question, the race of the person's mother was used; however, if a single response could not be provided for the person's mother, the first race reported by the person was used.

a. White. Persons who indicated their race as White, as well as persons who did not classify themselves in one of the specific race categories listed on the questionnaire but entered a response such as Canadian, German, Italian, Lebanese, or Polish. (Persons who did not classify themselves in one of the specific race categories but wrote in entries such as Cuban, Puerto Rican, Mexican, or Dominican were included in the "Other races" category; in the 1970 census most of these persons were included in the "White" category.)

b. Black. Persons who indicated their race as Black or Negro, as well as persons who did not classify themselves in one of the specific race categories, but reported entries such as Black Puerto Rican, Haitian, Jamaican, Nigerian, or West Indian.

c. American Indian, Eskimo, and Aleut:

American Indian. Persons who indicated their race as "Indian (American)" or who did not indicate a specific race category but reported the name of an Indian tribe.

Eskimo. Persons who indicated their race as "Eskimo."

Aleut. Persons who indicated their race as "Aleut."

d. Asian and Pacific Islander. In complete-count tabulations, includes all of the groups listed below except "Other Asian and Pacific Islander." In sample tabulations, it includes all of the groups listed below.

Japanese. Persons who indicated their race as Japanese, as well as persons who did not classify themselves in one of the specific race categories, but entered a response such as Nipponese or Japanese American.

47. RACE. (Continued)

Chinese. Persons who indicated their race as Chinese, as well as persons who did not classify themselves in one of the specific race categories, but reported entries such as Cantonese, Formosan, Taiwanese, or Tibetan.

Filipino. Persons who indicated their race as Filipino, as well as persons who did not classify themselves in one of the specific race categories, but entered a response such as Filipino American or Philippine.

Korean. Persons who indicated their race as Korean, as well as persons who did not classify themselves in one of the specific race categories, but reported a response such as Korean American.

Asian Indian. Persons who indicated their race as Asian Indian, as well as persons who did not classify themselves in one of the specific race categories, but reported entries such as Bengali, Bharati, Dravidian, East Indian, Goanese, Hindu Indic, Kashmiri, or South Asian.

Vietnamese. Persons who indicated their race as Vietnamese, as well as persons who did not classify themselves in one of the specific race categories, but reported a response such as Vietnam.

Hawaiian. Persons who indicated their race as Hawaiian. In the State of Hawaii, all persons who reported "Part-Hawaiian" were included in this category.

Guamanian. Persons who indicated their race as Guamanian, as well as persons who did not classify themselves in one of the race categories, but reported an entry such as Chamorro or Guam.

Samoan. Persons who indicated their race as Samoan, as well as persons who did not classify themselves in one of the specific race categories, but entered a response such as American Samoan or Western Samoan.

Other Asian and Pacific Islander. In sample tabulations only, persons who reported Cambodian, Hmong, Indo-Chinese, Laotian, Pakistani, Polynesian, Fiji Islander, Tahitian, Thai, or similar responses. Census basic records include codes for over 50 separate race groups within this category. In complete-count tabulations, this group is part of the "Other races" category below.

e. Other (Race n.e.c. "not elsewhere classified"). Includes all other races (except "Other Asian and Pacific Islander" groups) which were not included in the specific categories listed on the questionnaire. For example, persons reporting in the "Other" race category and providing write-in entries such as Eurasian, Cosmopolitan, Inter-racial, or a Spanish origin group (e.g., Mexican, Cuban, or Puerto Rican) were included in Race, n.e.c. Other Asian and Pacific Islanders are included in the "Other" category in 100-percent tabulations.

Persons who did not report a specific race but wrote in entries such as "Mexican," "Cuban," "South American," "Chicano," or "La Raza" remained in the "Other races" category for complete-count tabulations, and in the "Race, n.e.c." category for sample tabulations. STF 3, STF 4, and public-use microdata samples separately identify, as a subcategory with "Race, n.e.c.," persons who wrote in an entry implying Spanish origin. Such entries are not necessarily consistent with responses in the Spanish origin question.

In a few tables in which data for American Indian, Eskimo, Aleut, and Asian and Pacific Islander are not presented separately, the "Other" category encompasses all race categories not shown separately.

In some tabulations, the "Other" or "Race, n.e.c.," category is omitted to save space; data for this category are derivable by subtracting the sum of the specified race categories from the total.

Limitations: In previous censuses, undercoverage of the population has been associated with race. The 1970 census missed Blacks at a much higher rate than Whites. The Bureau has not prepared undercoverage rates for races other than White or Black, because vital records and other sources of relevant statistics do not consistently distinguish among other races.

Historical comparability: Questions on "race" or "color" have been asked in each census since 1790. In 1970, when persons with parents of different races were in doubt as to their classification, the race of the father was used. In 1980, the race of the mother was used for persons who could not provide a single response. The 1970 category "Negro or Black" has been retitled "Black or Negro." Individual categories for Vietnamese, Asian Indian, Guamanian, and Samoan have been added. In 1970, the categories Eskimo and Aleut appeared only on questionnaires used in Alaska; they were replaced by Hawaiian and Korean in all other States. In 1980, all four categories appeared on the questionnaire. As a result of the additions, the 1980 questionnaire had 14 specific race categories instead of 8 as in 1970.

In 1970, persons who did not report a specific race but wrote in Hispanic categories such as "Mexican," "Puerto Rican," or "Cuban" in the race question were assigned to White; for 1980 these persons remain in the "Other races" category.

48. RACE OF HOUSEHOLDER. In all cases where occupied housing units, households, or families are classified by race, the race of the householder, i.e., the person in column 1, is used (see Relationship for the definition of Householder). This item was determined on a complete-count basis.

Since some households include persons of more than one race, there may be minor differences in counts by race between (1) tabulations of "families by family size" or "households by persons in unit" where all persons regardless of their race are counted according to the race of householder and (2) tabulations of "persons in families" or "persons in households" where all persons are tallied according to their own race.

Historical comparability: Prior to 1980, the concept of "race of household head" was used instead of race of householder (see the historical comparability for Relationship). This change should not substantively affect the comparability of these data.

49. REGION (Maryland State Planning). A group of political subdivisions which serve as the largest substate unit of analysis for planning purposes in Maryland. The five regions and their component subdivisions are:

Baltimore Region
- Anne Arundel
- Baltimore City
- Baltimore
- Carroll
- Harford
- Howard

49. REGION (Maryland State Planning). (Continued)

- Washington Suburban Region
  - Montgomery
  - Prince George's
- Southern Maryland Region
  - Calvert
  - Charles
  - St. Mary's
- Frederick Region
  - Frederick
- Western Maryland Region
  - Allegany
  - Garrett
  - Washington
- Upper Eastern Shore Region
  - Caroline
  - Cecil
  - Kent
  - Queen Anne's
  - Talbot
- Lower Eastern Shore Region
  - Dorchester
  - Somerset
  - Wicomico
  - Worcester

50. RELATIONSHIP. Relationship to the person in column 1 of the census questionnaire, ascertained from replies to a complete-count question.

a. In household. Persons in the household include:

(1) Householder. The person who was reported in column 1. This reference person was to be the person or one of the persons in whose name the home was owned or rented. If there was no such person, any adult household member at least 15 years old who was not a roomer, boarder, or paid employee was to be reported in column 1. In completed-count tabulations, the number of householders is the same as the number of households or occupied housing units. In sample tabulations, the numbers may not always be the same because of differences in weighting sample data.

Family householder. A householder living with one or more persons related to him or her by birth, marriage, or adoption.

Nonfamily householder. A householder living alone or only with persons not related to him or her.

(2) Spouse. The husband or wife of the householder, living with the householder. This category may include persons in common-law marriages as well as persons in formal marriages; it does not include a partner or roommate of the opposite sex.

In complete-count tabulations, the number of spouses is the same as the number of married-couple families or married-couple family households. The number of spouses, however, is generally less than half of the number of "married persons with spouse present" in sample tabulations, since only spouses of householders are specifically identified as "spouse." Sample tabulations of the number of married persons with spouse present include subfamilies (see definition under Family) as well as married-couple families.

(3) Child. A son, daughter, stepchild, or adopted child of the householder, regardless of the child's age or marital status. The category excludes sons-in-law, daughters-in-law, and foster children.

Own child. A never-married child under 18 years who is a son, daughter, stepchild, or adopted child of the householder. In certain tabulations, own children are further classified as living with two parents or with one parent only. Own children of the householder living with two parents are by definition found only in married-couple families.

Related child. An "own child" or any other family member (regardless of marital status) who is under 18 years, except the householder or spouse. Foster children are not included since they are not related to the householder.

(4) Other relative. A household member related to the householder by birth, marriage, or adoption, but not included specifically in another relationship category. The scope of this category may differ from table to table, depending on which other relationship categories are included. In detailed tabulations (STF 2, STF 5, or PC 80-1-D) the following categories may also be shown:

Parent. In complete-count tabulations, the father or mother of the householder, including a stepparent or adoptive parent. On sample basic records and microdata files, fathers- and mothers-in-law constitute a separate category coded from write-in responses under "other relative" on the questionnaire. One STF 5 and PC 80-1-D tabulation includes both parents and parents-in-law in the same category.

Brother or sister. In complete-count tabulations, the brother or sister of the householder, including stepbrothers, stepsisters, and brothers and sisters by adoption. On sample basic records and microdata files, brothers- and sisters-in-law constitute a separate category coded from write-in responses. One STF 5 and PC 80-1-D tabulation includes brothers- and sisters-in-law along with brothers and sisters in the same category.

Son- or daugher-in-law. Spouse of a son or daughter of the householder, coded from write-in responses.

Grandchild. Grandchild of the householder, coded from write-in responses.

Other. The following categories are separately coded in sample basic records and public-use microdata files only: nephew/niece, grandparent, uncle/aunt, cousin, and "other."

50. RELATIONSHIP. (Continued)

(5) Nonrelative. Any household member, including foster children, not related to the householder by birth, marriage, or adoption. The following categories are presented in certain more detailed tabulations.

Partner or roommate. Nonrelative who lives together and shares expenses with the householder.

Roomer or boarder. Roomer, boarder, lodger, or relative of such; or foster child or ward of the householder.

Paid employee. Nonrelative who is paid to provide household services, such as a maid, housekeeper or gardner.

Other nonrelative. Nonrelative who cannot be described by the above categories, including a person who is related to a partner or roommate or to a paid employee.

b. Inmate of institution and other person in group quarters. (Treated as categories of relationship for purposes of tabulation. For definitions, see Group Quarters, Persons In.) Persons in group quarters are excluded from counts of persons in households or persons in unit.

Responses to the relationship item were also used in defining families, and subfamilies (see Family; Family Type; Household Type). Tabulations frequently report relationship for persons in family households separately from persons in nonfamily households.

Historical comparability: The question was revised from 1970 to replace the head-of-household category with a format using a reference person, i.e., the "person in column 1." 1980 householders differ from 1970 household heads primarily where the wife in a married-couple family is listed as the "person in column 1." In 1970, the husband was automatically assumed to be the "head" of such a family.

In 1980 tabulations, the substitution of one spouse for the other as the reference person may affect certain of the classifications, such as "parent" or "brother or sister," within the "other relative" grouping. The person in whose name the house or apartment is owned or rented may in a few cases differ from the person considered by other household members as the "head," but this is expected to affect the classification of relatively few households.

The 1970 questionnaire category "other relative of head" was replaced on the questionnaire by three categories, "brother/sister," "father/mother," and "other relative." Since the category "patient or inmate" is marked only by census enumerators, it was moved to the bottom of the form in a space reserved for "census use only." New nonrelative categories include "partner, roommate" and "paid employee." The former question asking relationship to head of family or household was asked from 1880 to 1970.

51. RENT, CONTRACT. The monthly rent agreed to, or contracted for, regardless of any furnishings, utilities, or services that may be included. Rent is shown for occupied units rented for cash and vacant units for rent. For vacant units, rent is the amount asked for the unit at the time of enumeration, and is sometimes labeled "rent asked."

Contract rent is tabulated for "specified renter-occupied" units, which excludes one-family houses on 10 acres or more. Respondents are to report rent only for the housing unit enumerated and to exclude any rent paid for additional units or for business premises. The rent amount for the unit is to be reported even if paid for by someone outside the household, or for some reason, not paid. Respondents who do not pay rent monthly are asked to convert the sum to a monthly average.

In the computation of aggregate and mean rent, $35 is taken as the average of the interval "less than $50," and $550 is taken as the average of the interval "$500 or more." This item was asked on a complete-count basis.

No cash rent. Rental units occupied without payment of cash rent. The unit may be owned by friends or relatives who live elsewhere and who allow occupancy without charge. Rent-free houses or apartments may be provided to compensate caretakers, ministers, tenant farmers, sharecroppers, or others.

Historical comparability: Similar data have been collected since 1930 (although the first full housing census did not occur until 1940). Rent intervals reported have gone to higher dollar figures in recent decades. The 1970 question on rent had a top category of $300 or more; it also listed fewer rent intervals than the 1980 question. Constant dollar comparisons, 1970 to 1980, are not prepared.

52. RENT, GROSS. Contract rent plus the estimated average monthly cost of utilities (water, electricity, gas) and fuels (oil, coal, kerosene, wood, etc.) to the extent that these are paid for by the renter (or paid for by a relative, welfare agency, or friend) in addition to the rent. Gross rent is calculated for "specified renter-occupied" housing units, which excludes one-family houses on 10 acres or more. Gross rent is sometimes preferred to contract rent in comparing costs since contract rent may or may not include utilities.

Gross rent data are typically tabulated in the same intervals as are used for contract rent. A unit classified as "no cash rent" in contract rent is also classified that way in gross rent, even if the unit's occupants pay for utilities themselves. Gross rent is calculated on a sample basis.

Gross rent as a percentage of income. The ratio of gross rent to household income in 1979, converted to percentage form, reported for "specified renter-occupied" units, which excludes one-family homes on 10 acres or more. Data are reported as medians and in terms of the number of units in categories such as "less than 20 percent," "20 to 24 percent," "25 to 34 percent," and "35 percent or more;" and these figures are typically cross-classified with household income. No-cash-rent units and units occupied by households reporting no income or a net loss are assigned to a "not computed" category. This item was computed on a sample basis.

Limitations: In addition to the effect of using interval midpoints, noted above, gross rent data are affected by the tendency of respondents to overstate utility costs.

Historical comparability: Gross rent data have been derived since 1940. In 1970, gross rent figures were somewhat more precise since exact dollar figures were available for contract rent. Also, in reporting a rent-to-income relationship, gross rent was computed as a percentage of family or primary individual income, not household income.

53. RESIDENCE IN 1975. The usual place of residence 5 years before the census (i.e., on April 1, 1975) was asked on a sample basis of persons 5 years old or over. If residence was not in "this house" in 1975, the location was recorded in terms of State, county, and city, or foreign country. The same rules for usual place of residence apply to 1975 as to 1980. Persons such as college students or military personnel were to report the actual residence rather than the legal residence, if different. Residence in 1975 is used in conjunction with residence in 1980 to determine the residential mobility of the population.

a. Same house. All persons 5 years old and over who did not move during the 5 years, plus persons who moved, but by 1980 had returned to their 1975 residence.

b. Different house in the United States. Persons who lived in the United States on April 1, 1975, in a different house from the one they occupied on April 1, 1980. This includes persons who lived in the same building, but a different apartment, or in the same mobile home but in a different location.

c. Same county. Persons who lived in a different house in the same county in 1975.

d. Different county. Persons who lived in a different county in 1975.

Same State.

Different State. This population is frequently subdivided by region of 1975 residence.

e. Abroad. Persons with residence in a foreign country, Puerto Rico or an outlying area of the United States in 1975, including Armed Forces stationed overseas.

Write-in responses were coded in census processing offices for a sample of approximately one-half of all long-term questionnaires (a cost-saving measure). For persons in the United States in 1975, census basic records specify the State, and county, and the city, town, or village (if residence was inside the incorporated limits). For persons abroad in 1975, the basic records specify the country or outlying area.

Public-use microdata "A" and "B" samples show residence in 1975 in the same terms as they show 1980 residence, that is, States, SMSA's, selected places and county groups with 100,000 or more inhabitants. This makes possible the tabulation of a full origin-destination martrix of migration flows. The "C" sample shows residence in 1975 in terms of regions, divisions and selected States.

Subject reports are planned to cross-tabulate State of residence in 1975 with State of residence in 1980.

Certain tabulations present data on residence in 1975 separately for persons who were in the Armed Forces or in college in 1975 or 1980 so that their movements can be discounted in assessing migration trends.

The number of persons living in a different house in 1975 is less than the total number of changes in residence during the 5-year period. Some persons in the same house at the two dates had moved during the 5-year period but by the time of enumeration had returned to their 1975 residence. Other persons who were living in a different house had made two or more intermediate moves.

Limitations: Since Residence in 1975 was coded for only a half-sample of the long-form questionnaires, rather than the full sample, any cross-tabulation involving residence in 1975 (e.g., by age) will yield estimates which differ somewhat from figures derived from the full sample or the complete count. For example, the estimated number of persons 5 years old and over derivable from residence in 1975, tabulations will not be exactly the same as found in other age tabulations.

Historical comparability: Similar questions on residence 5 years earlier were asked in 1940, 1960, and 1970. The mobility question in 1950 applied to residence one year earlier. Prior to 1980, publications included the category Moved, Residence Not Reported. In 1980, allocations have been made for nonresponse.

54. SAMPLE DATA. The statistics collected from the part of a population included in a sample in order to estimate information about the whole of that population. "Sample data" is also used to refer to the estimates of the characteristics of the population that are prepared.

55. SAMPLING ERROR. That part of the error associated with a statistical estimate that is due to the fact that only a subset (sample) of the whole population was observed as distinct from errors due to imperfect selection, bias in response or estimation, errors of observation and recording, etc.

56. SCHOOL ENROLLMENT. Persons 3 years old or over are classified as enrolled in school if they attended regular school or college at any time since February 1, 1980. This question was asked on a sample basis.

a. Schooling included. As indicated on the questionnaire and in instructions to respondents, "regular school or college" includes nursery school, kindergarten, elementary school and schooling which leads to a high school diploma or college degree. Attendance can be either by day or night, full time or part time, to be counted as regular schooling. Enrollment in a trade or business school, company training, or tutoring was counted if the course would be accepted for credit at a regular elementary school, high school, or college.

b. Schooling excluded. Persons were excluded from the enrollment figures if the only schools they had been attending at any time since February 1, 1980, were not "regular" (unless courses taken at such schools could have been counted for credit at a regular school). Schools regarded as not "regular" may be nursery schools which simply provide custodial day care; specialized vocational, trade, or business schools outside the "regular" system, such as television repair schools, barber's colleges, or typist's training schools; on-the-job training; and correspondence courses.

Historical comparability: Questions on schooling have been included since 1930, although the time reference varied until 1950 when February 1 to the time of enumeration was adopted as the reference period. Most tabulations of school enrollment in 1970 were restricted to persons 3 to 34 years old, whereas most 1980 tabulations do not have an upper age limit.

57. SCHOOL LEVEL. Persons 3 years old and over enrolled in regular school (see School Enrollment) are classified according to the level and year of school in which they were enrolled. This information was collected on the sample questionnaire by means of a question which asked for the highest grade or year attended.

Respondents were instructed to report the highest grade attended even if it was not completed. Persons still in school were to mark the grade in which they were currently enrolled. Schooling received in ungraded schools was to be reported as the equivalent grade in the regular American school system.

a. Nursery school. A school organized to provide educational experiences for children during the year or years preceding kindergarten. Children in "Head Start" or similar programs were to be reported in nursery or kindergarten as appropriate; if the respondent was uncertain as to the level of the Head Start Program, nursery school was to be marked.

b. Kindergarten. An organized educational program the year before first grade.

c. Elementary school. Includes grades 1 through 8, identified separately in some tabulations. (Persons enrolled in a junior high school or middle school are classified as enrolled in elementary school or high school according to year in which enrolled.)

d. High school. Includes grades 9 through 12, identified separately in some tabulations.

e. College. Junior or community colleges, regular 4-year colleges, and graduate or professional schools, Includes 1 through 7 academic years and 8 years or more, identified separately in some tabulations. Entried on highest grade attended were edited for consistency with age. For instance, entries indicating college attendance for persons under 15 years old were edited out.

Historical comparability: Nursery school first appeared as a category in 1970. An item on vocational training which was included in the 1970 census, was deleted in 1980. For 1980 as compared to 1970, there was an increase in the number-of-years-of-college categories, from "6 or more" to "8 or more."

58. SCHOOL TYPE. Persons 3 years old and over enrolled in regular school (see School Enrollment) are classified according to whether they are attending public, private church-related, or other private schools. This information is collected on a sample basis.

a. Public. Any school or college which is controlled and supported primarily by a local, county, State, or Federal government.

b. Church related. A nonpublic school or college which is controlled and supported primarily by a religious organization, e.g., a parochial school. (Respondents were not instructed how to distinguish private church-related from private, not church-related schools.)

c. Other private. A nonpublic school or college controlled or supported primarily by private groups other than religious organizations, such as private nursery schools and nonreligious elementary schools.

Limitations: In using the public/private school distinction for college enrollment, some caution should be exercised, since there is evidence that, in some parts of the country, the classification of individual schools may not be entirely clear and census data may differ considerably from administrative figures.

Historical comparability: Similar to a question asked in 1970, but with the following wording modifications: the 1970 questionnaire category "Yes, public" was changed to "yes, public school, public college;" "yes, parochial" was changed to "yes, private, church-related;" and "yes, other private" was changed to "yes, private, not church-related."

59. SCHOOL YEARS COMPLETED. Data on years of school completed are derived from two questions, one identifying the highest grade attended in regular school (see School Enrollment); the second determining whether the respondent finished the grade specified. These data were collected on a sample basis.

Those persons who passed a high school equivalency examination (such as GED) were marked "12" under the highest grade attended (if they had not completed or were not enrolled in a higher grade). Schooling received in foreign schools was to be reported as the equivalent grade or year in the regular American school system.

The number tabulated in each category of years of school completed includes (a) persons who reported that they had attended the indicated grade and had finished it, (b) those who had attended but did not complete the next higher grade and (c) those still attending the next higher grade. Most tabulations of years of school completed are restricted to persons 25 years old and over, although some include persons 18 to 24 years old. Tabulations include persons in school as well as those who have completed their schooling. A typical way of reporting years of school completed is as follows:

a. Elementary: 0 to 8 years

b. High School: 1 to 3 years
4 years

c. College: 1 to 3 years
4 or more years

High school graduates. Persons who have completed 4 years of high school (grade 12) or any higher level of education. Therefore, to obtain a count of high school graduates from the breakdown illustrated above, the categories "High school: 4 years," "College: 1 to 3 years" and "College: 4 or more years" are to be added together.

Historical comparability: Questions on years of school completed have been asked in censuses since 1940, as a replacement for the literacy question which had been asked from 1840 to 1930.

60. SEWAGE DISPOSAL. The type of sewage disposal system for the structure in which the unit is located, ascertained for occupied and vacant housing units. This item was asked on a sample basis.

    a. Public sewer. Connected to a city, county, sanitary district, neighborhood, or subdivision sewer system. A public sewer may be operated by a government body or by a private organization. Small sewage treatment plants, called "neighborhood septic tanks" in some localities, are classified as public sewers. All units in structures with five or more units are assumed to be connected to a public sewer.

    b. Septic tank or cesspool. An underground tank or pit into which sewage flows from the plumbing fixtures in the building.

    c. Other means. Includes an individual sewer line running to a creek, lake, swamp, etc.; units with a privy; and other arrangements.

    Historical comparability: Similar data were collected in 1960 and 1970; in 1960, however, data were collected only outside cities with 50,000 or more persons.

61. SEX. Ascertained on a complete-count basis.

    Historical comparability: A question on the sex of individuals has been asked of the total population in every census.

62. SPANISH ORIGIN. Determined by a complete-count question which asks respondents to self-identify whether they are of Spanish origin or descent. If, when interviewed, the person reported a multiple origin and could not provide a single origin, the origin of the person's mother was used. If a single response was not provided for the person's mother, the first reported origin of the person was used.

    Persons marking any one of the four "Spanish" categories, i.e., Mexican, Puerto Rican, Cuban, or other Spanish, are collectively referred to as "persons of Spanish origin."

    Preliminary evaluations of 1980 census data suggest some limited misreporting of Spanish origin. Available evidence indicates that the misreporting may have occurred only in selected areas with relatively small Spanish-origin populations, such as in some Southern States, but it not apparent in those areas with the largest concentrations of Spanish-origin persons. For a fuller discussion of the reporting in the Spanish-origin item, see the 1980 census Supplementary Report, "Persons of Spanish Origin by State: 1980" (PC 80-S1).

    Historical comparability: The Spanish-origin question was asked on a 100-percent basis for the first time in 1980. A similar question was asked on the 1970 5-percent sample questionnaire. For 1980, the category "No, not Spanish/Hispanic" appeared first (the corresponding category appeared last in 1970). Also, the terms "Mexican-American" and "Chicano" are added to the term "Mexican." The category "Central or South American," included in 1970, was dropped.

    Although a question on Spanish origin was included in 1970, it was not the major identifier used to classify the Hispanic population in the 1970 census as it is in 1980. Depending on the section of the country, 1970 census data for "Persons of Spanish Heritage" were variously defined as "Persons of Puerto Rican Birth or Parentage" (in New York, New Jersey, and Pennsylvania), as "Persons of Spanish Language or Spanish Surname" (in Arizona, California, Colorado, New Mexico, and Texas), and as "Persons of Spanish Language" (in the remaining 42 States and the District of Columbia). "Spanish language" referred to those persons who in 1970 reported Spanish as their mother tongue, as well as persons in families in which the household head or spouse reported Spanish as his or her mother tongue.

63. SUBSTITUTION. The imputation of data for a person or housing unit known to be present but for which there is no information on the questionnaire. A previously processed person or unit is drawn from the file under certain criteria, and the full set of characteristics for the person or unit is duplicated.

64. SUMMARY STATISTICS OR SUMMARY DATA. The results of aggregating or summarizing data from individual units of observation (for example, persons) to characterize the group of units (for example, the population of a specific area). Summary data may be in the form of frequency counts (for example, the number of females between 16 and 24 in a census tract), or may be in the form of cross-tabulations or descriptive measures such as means, medians, percents, or ratios.

65. SUMMARY TAPE FILE (STF). A specified set of summary tapes issued from the 1980 census (for example, STF 1A, 2B) containing a broad range of characteristics of population and housing by area (corresponding terminology in 1970: "First Count File A," etc.). The numeric character of the STF designation indicates the basic series of tapes which share the same subject matter and format. The alphabetic character identifies a part containing records for certain types of geographic areas. For example, "STF 1" refers collectively to all of its parts - STF 1A, STF 1B and STF 1C; STF 1A presents data for ED's, BG's, census tracts, and certain larger areas.

66. SUPPRESSION. A procedure by which certain data items are excluded from public release to maintain confidentiality, i.e., to avoid the disclosure of information which could be associated with specific individuals or, in the case of economic statistics, establishments. It is signified in the 1980 census printed reports by three dots (...) and with special flags on summary tape files.

67. TELEPHONE IN UNIT. Presence of a telephone in the housing unit, ascertained for occupied units. A telephone in the building but not in the respondent's living quarters is not counted. This item was asked on a sample basis.

    Historical comparability: Similar data have been collected since 1960. The 1980 question differs from its 1970 and 1960 counterpart which, designed more as an aid to enumeration, asked whether the household could be reached by phone. The 1980 question refers only to a telephone inside the housing unit. (As an aid to followup enumeration, respondents were also asked to write their telephone numbers on the back of the questionnaire.)

68. TENURE. The classification of all occupied housing units as either owner-occupied or renter-occupied. This item was asked on a complete-count basis.

a. Owner-occupied. A housing unit is "owner-occupied" if the owner or co-owner lives in the unit even if the unit is mortgaged or not fully paid for. The owner or co-owner must live in the unit but need not be the person listed in column 1 of the 1980 census questionnaire.

b. Renter-occupied. All occupied housing units which are not owner-occupied, regardless of whether cash rent is paid by a member of the household. ("No cash rent" units, a subcategory of renter-occupied, are separately identified in rent tabulations. Such units are generally provided free by friends or relatives, or in exchange for the services of, for example, a caretaker, minister, tenant farmer, or sharecropper.)

Historical comparability: Tenure has been collected since 1890. In 1970, the question on tenure also included a category for condominium and cooperative ownership. In 1980, condominiums are identified in a separate question.

69. TRANSPORTATION TO WORK, MEANS OF. The principal means of travel or type of conveyance usually used during the reference week in traveling from home to work at the address given in the place-of-work question. (The reference week was the calendar week prior to the date on which the respondent or enumerator completed the questionnaire, further discussed under Labor Force Status.) If more than one means of transportation was used, the respondent was instructed to report the one usually used for most of the distance.

These data were obtained from the full sample for persons at work last week (i.e., including both civilian employed and Armed Forces at work) and are tabulated for persons 16 years old and over. Major categories which appear in abbreviated tabulations include:

a. Private vehicle. Cars (including station wagons and company cars), trucks (including pickup trucks and small panel trucks); and vans with passenger seats and side and/or rear windows.

Drive alone. Includes persons who usually drove alone as well as persons who were driven to work by someone who then drove back home or to a nonwork destination.

Carpool. Persons who share driving (e.g., persons in carpools who took turns driving on different days), drive others only, or ride as a passenger only (includes persons who were usually driven to work by another worker, not necessarily someone who worked at the same place as the respondent). Persons in a carpool were also asked how many people usually rode to work in the car, truck, or van.

b. Public transportation. Buses or streetcars, railroads (including commuter trains), subway or elevated (rapid transit operating on its own right-of-way underground, on the surface, or elevated), and taxicab.

c. Other means. Motorcycles, bicycles, write-in responses (e.g., ferryboat, airplane), and persons who "walked only," i.e., who walked to work and used no other means of transportation.

d. Worked at home. Persons working on a farm where he or she lived, or in an office or shop in the person's house.

A respondent who was on a business trip during the reference week may report a means of transportation to work that does not seem reasonable for the place of residence, e.g., a resident of Montana reporting going to work last week by subway. There was no coding of write-in responses within the "other means" category.

Historical comparability: Data on means of transportation to work have been collected since 1960. In 1970, the question referred to the means of transportation to work on the last day of the previous week rather than the usual means during the week. The categories for trucks, vans, motorcycles, and bicycles are new for 1980. Rather than using a separate question on carpooling, the 1970 means-of-transportation-to-work question specified "driver, private auto" and "passenger, private auto."

70. TRAVEL TIME TO WORK. The usual number of minutes spent in traveling from home to work (one way) during the reference week, ascertained for persons at work last week and tabulated for persons 16 years old and over. (See the discussion of the reference week under Labor Force Status.) Travel time includes time spent waiting for public transportation, picking up passengers in carpools, etc. Time taken occasionally to stop for meals, shopping, appointments, taking children to school, etc. was not included. This item was asked on a sample basis.

This item was coded in census processing offices from the respondent's write-in entry and is recorded on census basic records and public-use microdata in minutes. In some reports, travel time to work is reported in terms of categories: less than 10 minutes, 10 to 19 minutes, 20 to 29 minutes, 30 to 44 minutes, and 45 or more minutes. More frequently the data are presented as an average: mean travel time to work, reported in minutes.

Limitations: Since travel time to work was coded only for a sample of one-half of all long-form questionnaires, along with place of work and residence in 1975. The estimated number of workers 16 years and over who did not work at home as derived from travel time figures will differ somewhat from the corresponding figure derived from a tabulation of means of transportation to work, a full-sample item. Further, any cross-tabulation of travel time to work with other items is necessarily based only on the half sample.

Historical comparability: Travel time to work is a new item for 1980.

71. UNITS IN STRUCTURE. The number of housing units in the structure in which the unit is located. The number of units in structure includes all housing units whether occupied or vacant, but excludes group quarters or businesses. The statistics are presented in terms of the number of housing units in structures of specified types and sizes, not in terms of the number of structures with housing units.

71. UNITS IN STRUCTURE. (Continued)

A structure is a separate building that either has open space on all sides or is separated from other structures by dividing walls that extend from ground to roof.

a. One-family house. Synonymous with 1-unit structure (i.e., the term does not imply occupancy by a family as defined for census purposes). This category excludes mobile homes or trailers as defined below.

b. 1-unit, detached. 1-unit structure detached from any other house, i.e., with open space on all four sides. Such structures are considered detached even if they have an adjoining shed or garage. A one-family house which contains a business is considered detached as long as the building has open space on all four sides. Mobile homes or trailers to which one or more permanent rooms have been added or built on are also included.

c. 1-unit, attached. 1-unit structure which has one or more walls extending from ground to roof separating it from adjoining structures. In row houses (sometimes called townhouse), double houses, or houses attached to nonresidential structures, each house is a separate attached structure if the dividing or common wall goes from ground to roof.

d. 2-or-more units. Units in structures containing 2 or more housing units; further categorized as units in structures with 2, 3 or 4, 5 to 9, 10 to 19, 20 to 49, and 50 or more units.

e. Mobile home or trailer, etc. Both occupied and vacant mobile homes to which no permanent rooms have been added. If only a porch or shed has been added, the unit is counted in this category. Mobile homes or trailers used only for business purposes or for extra sleeping space, and mobile homes or trailers for sale on a dealer's lot at the factory, or in storage are not counted in the housing inventory.

In the printed reports, this category includes occupied housing units indicated as "boat, tent, van, etc.," i.e., any occupied units which do not fit the other listed categories. Houseboats, railroad cars, campers, and caves used as a usual place of residence provide additional examples.

Limitations: Users of small-area data occasionally are troubled by certain anomalies in units-in-structure data. For example, a user may encounter a table in which only 5 units in a census tract are listed as being in a structure of 10 or more units. Sometimes respondents do not know the exact number of units in a structure and give an incorrect response.

Historical comparability: Data have been collected on units in structure since 1940 and on mobile homes and trailers since 1950. The residual category "boat, tent, van, etc." replaces the 1970 category "other-describe." The instruction to respondents that a mobile home or trailer counts as a detached house if a room (though not a porch or shed) has been built on to it was added in 1970 and retained for 1980.

72. UNIVERSE. The set of entities of which the characteristics are studied or investigated, or about which an inference is made. For example, the universe of the population census is all U.S. residents; and, with reference to census data tables, the universe of a particular table might be stated as persons 65 years old and over if the table distributes all such persons into specific categories.

73. UNRELATED INDIVIDUAL. An unrelated individual may be (1) a householder living alone or only with persons not related to him or her, (2) a roomer, boarder, partner, roommate, or resident employee unrelated to the householder, or (3) a group quarters member who is not an inmate of an institution. Classification as an unrelated individual derives from the complete-count question on relationship.

Examples of unrelated individuals include a widow who occupies her house alone or with one or more other persons not related to her, a roomer not related to the householder, a maid living as a member of her employer's household, and a resident staff member in a hospital dormitory. Persons living with one or more relatives in a household where the householder is not related to any of them are classified in the census as unrelated individuals; for example, a husband and wife who rent a room from a householder to whom they are not related. Presentations are shown for the universe of "unrelated individuals 15 years and over" for income and poverty.

Historical comparability: A similar concept was used in 1970.

74. URBAN AND RURAL (Population). Urban and rural are type-of-area concepts rather than specific areas outlined on maps. As defined by the Census Bureau, the urban population comprises all persons living in urbanized areas (UA's) and in places of 2,500 or more inhabitants outside UA's.

The rural population consists of everyone else. Therefore, a rural classification need not imply farm residence or a sparsely settled area, since a small city or town is rural as long as it is outside a UA and has fewer than 2,500 inhabitants.

The terms urban and rural are independent of metropolitan and nonmetropolitan designations; both urban and rural areas occur inside and outside SMSA's.

Historical comparability: Except for the minor relaxation of UA criteria discussed below, urban and rural definitions have been consistent since 1950. Within small counties, measurements of urban and rural populations over time may be significantly affected by the increase or decrease of a place's population across the 2,500 population threshold, e.g., the increase of 1 person to a place of 2,499 results in an increase of 2,500 to the county's urban population.

75. URBANIZED AREA (UA). A population concentration of at least 50,000 inhabitants, generally consisting of a central city and the surrounding, closely settled, contiguous territory (suburbs).

The UA criteria define a boundary based primarily on a population density of at least 1,000 persons per square mile, but also include some less densely settled areas, and such areas as industrial parks and railroad yards, if they are within areas of dense urban development. The density level of 1,000 persons per square mile corresponds approximately to the continuously built-up area around a city(ies). The "urban fringe" is that part of the UA outside of a central city(ies).

75. URBANIZED AREA (UA). (Continued)

Typically, an entire UA is included within an SMSA. The SMSA is usually much larger in terms of territory covered and includes territory where the population density is less than 1,000. Occasionally, more than one UA is located within an SMSA. In some cases, a small part of a UA may extend beyond an SMSA boundary or possibly into an adjacent SMSA. A few 1980 UA's have been defined in areas which do not meet the criteria for SMSA designation. UA's may cross State boundaries. In a few cases a UA does not include all of an "extended city," that is, a place which is determined to have a significant amount of rural territory.

Historical comparability: Because UA's are defined on the basis of population distribution at the time of a decennial census, their boundaries tend to change following each census to include expanding urban development.

The criteria have been fairly constant since 1950, although in each decade some new refinements have been added. For the 1970 census, in which 252 UA's were recognized, it was necessary for the central city to have a population of 50,000 or more, or for there to be "twin cities" with a combined population of 50,000 and with the smaller city having at least 15,000. In 1974 the criteria were liberalized to allow UA recognition to certain cities between 25,000 and 50,000, and this resulted in 27 new urbanized areas. For 1980, no minimum population size is required for a central city.

76. VACANCY STATUS. Determined for housing units at the time of enumeration. Vacancy status pertains to year-round vacant units. Vacancy status and other characteristics of vacant units are determined by enumerators questioning landlords, owners, neighbors, rental agents, and others.

The housing inventory includes vacant mobile homes or trailers intended to be occupied on the site where they stand. Vacant mobile homes on dealer sales lots or in storage yards are not counted as housing units.

New units not yet occupied are classified as vacant housing units if construction has reached a point where all exterior windows and doors are installed and final usable floors are in place. Vacant units are excluded if open to the elements; that is, if the roof, walls, windows, or doors no longer protect the interior from the elements, or if there is positive evidence (such as a sign on the house or in the block) that the unit is to be demolished or is condemned. Also excluded are quarters being used entirely for nonresidential purposes, such as a store or an office, or quarters used for the storage of business supplies or inventory, machiner, or agricultural products.

a. Vacant year-round units. Vacant units intended for use, even if only occasionally, throughout the year.

For sale only. Vacant year-round units offered for sale only. The category includes mainly one-family houses, but also two types of vacant units in multi-unit buildings: (1) vacant units (which are for sale only) in a cooperative or condominium and (2) vacant units intended to be occupied by the new building owners in multi-unit buildings that are for sale. An individual unit that is vacant because it is being held for sale of the entire building is classified as "other vacant." Vacant units offered for rent or sale at the same time are classified as "for rent."

For rent. Vacant year-round units offered for rent, and vacant units offered for rent or sale at the same time, including vacant units for rent in a building for sale.

Rented or sold, awaiting occupancy. Vacant year-round units sold or rented but still unoccupied when enumerated -- including units where rent is agreed on but not yet paid.

Held for occasional use. Vacant units for weekend or other occasional use throughout the year. Shared ownership or "time sharing" condominiums are also classified here.

Other vacant. Vacant units for year-round occupancy not classified above, for example, units held for a janitor or caretaker, settlement of an estate, pending repairs or modernization, or personal reasons of the owner.

b. Vacant seasonal and migratory units. Vacant units used or intended for use only in certain seasons. Any unit used throughout the year, even if only occasionally, is excluded. Seasonal units include those used for summer or winter sports or recreation - beach cottages and hunting cabins, for example. Seasonal units may also include quarters for such workers as herders and loggers. Migratory units include those for farm workers during crop season.

Limitations: Most tables exclude vacant seasonal and migratory units since information on characteristics of such units is difficult to obtain.

Historical comparability: Similar data have been collected since 1940. In 1970, seasonal and migratory vacant units were reported in two separate categories.

77. VEHICLES AVAILABLE. The total number of automobiles, vans, and light trucks - one ton or less - available at home for the use of members of the household, ascertained for occupied housing units. This tabulation adds together responses to the two separate questions on automobiles and trucks or vans. "Three or more" vehicles available is the highest category of this question. The statistics do not reflect the number of vehicles privately owned or the number of households owning vehicles. These items were asked on a sample basis.

Historical comparability: Information on vans and light trucks is new for 1980.

78. WATER, SOURCE OF. Source of the water used by the occupants or intended occupants of the housing unit, ascertained for occupied and vacant housing units. This item was asked on a sample basis.

a. Public system or private company. A common source supplying running water to six or more housing units. The water may be supplied by a city or county water department, a water district, a private water company, etc., or it may be obtained from a well which supplies six or more housing units.

78. WATER, SOURCE OF. (Continued)

b. Individual well. Water obtained from a well on the property of the unit being enumerated or on a neighboring property providing water to five or fewer housing units. The well water may be hand drawn, wind drawn, or engine drawn; piped or not piped; stored in tanks; or used directly from the well.

Drilled. A well generally made with a mechanical drilling rig and less than 1½ feet in diameter. Drilled wells include artisian (natural spring) wells.

Dug. A well generally hand dug and wider than 1½ feet in diameter.

c. Some other source. Water obtained from springs, creeks, rivers, ponds, lakes, cisterns, or other sources not listed, but not from a public system, private company, or well.

Historical comparability: Similar data were collected in 1960 and 1970; in 1960, however, data were collected only outside cities with 50,000 or more persons. The distinction between drilled wells and dug wells is new for 1980.

79. WEIGHT. A numerical coefficient that is applied to sample values as a result of the process of developing estimates for the surveyed population (the universe). The weight assigned to a given sampling unit reflects (a) the product of the inverse of its selection probability and (b) adjustments for nonresponse and various sample design features. For example, for the 1980 census, long-form questionnaires were used for a one-in-six sample of households in most areas. An individual in that sample, on the average, has a weight of 6, i.e., was counted as representing six persons.

80. YEAR MOVED INTO UNIT. The year of the householder's latest move into the housing unit, ascertained for occupied units. Respondents who had moved back into a unit they previously occupied were asked the year of the most recent move, as were those who moved from one apartment to another in the same building. This item also includes those who, living in a mobile home, moved from one location to another in the same mobile park. The intent of this question is to establish the length of occupancy by the present householder.

The year that the householder moved in is not necessarily the same year other members of the household moved, although in the great majority of cases an entire household moves at the same time. Respondents who indicated that they "always lived here" are assigned to the category corresponding to their year of birth. This item was asked on a sample basis.

Limitations: An evaluation study after the 1970 census found that the census figures for the year the household head moved into the unit substantially overstated the category "always lived here."

Historical comparability: In 1960 and 1970, "Year Moved Into Unit" was asked of every person and included in population reports. Year Moved Into Unit in housing tabulations referred to the year the head moved in. The 1970 questionnaire indicated seven time spans: 1949 or earlier, 1950 to 1959, 1960 to 1964, 1965 or 1966, 1967, 1968, and 1969 or 1970.

81. YEAR-ROUND HOUSING UNITS. All occupied units plus vacant units intended for year-round use. Almost all data on housing characteristics are limited to year-round housing units. Vacant units held for seasonal use or migratory labor are excluded because it is difficult to obtain reliable information for them. Counts of the total housing inventory include both year-round and seasonal units.

82. YEAR STRUCTURE BUILT. The year the original construction of the building was completed (not the date of any later remodeling, addition, or conversion). This item was ascertained for occupied and vacant housing units. For housing units under construction which met the housing unit definition, i.e., all exterior windows, doors, and final usable floors in place, the category "1979 or March 1980" is used. For mobile homes, trailers, and houseboats, the manufacturer's model year is assumed to be the year built. For railroad cars, tents, caves, etc., the date "1939 or earlier" is used. The figures show the number of units in structures built during the specified periods and still in existence at the time of the census. This item was asked on a sample basis.

Limitations: Year-built data are particularly susceptible to response errors and nonreporting since respondents must rely on their memory or estimates of persons who have lived in the neighborhood a long time, etc. A 1970 census evaluation study found greater inconsistencies between the census and reinterviews among earlier year-built categories than among categories for more recent periods.

Historical comparability: Similar data have been collected since 1940. The categories in 1970 were: 1939 or earlier, 1940 to 1949, 1950 to 1959, 1960 to 1964, 1965 to 1968, and 1969 to 1970.
